# THE FASTEST, MOST THRILLING, 3D DRIVING GAME YET!

Take the wheel of your turbo-charged Porsche as you and your partner go in pursuit of dangerous criminals all driving an evil array of souped-up roadsters.

## TURBO BOOST!

Need to catch up in a hurry? Well, just one press of your Turbo Button will leave your eyes in the back of your head!

## BARRELLING THROUGH THE CITY STREETS,

along the roughest of dirt tracks and through busy tunnels - If you can hold the line! The low life can run, but they can't hide... **CHASE H.Q.**

AMSTRAD £9.99 COMMODORE	SPECTRUM £9.99 PRECISION	ATARI ST £19.99 JAN 91	AMIGA £24.99 AMIGA

# ARCADE GAME OF THE YEAR

# Bloodwych

DATA DISK - VOLUME 1  
AVAILABLE SOON ON ATARI ST AND AMIGA

ARGUE! BANTER!  
LIE THROUGH  
YOUR TEETH!!!

Atari ST Screen Shot

Amiga	£24.99
Atari ST	£24.99
Spectrum (tape)	£9.99
Spectrum (disc)	£14.99
Amstrad CPC (tape)	£9.99
Amstrad CPC (disc)	£14.99
Commodore 64 (tape)	£9.99
Commodore 64 (disc)	£12.99

As the people of the Bloodwych awake to a new dawn, they find a stranger in their midst - from one of many races he has come. His task: to halt the demon that lies dormant within the Castle of the Bloodwych.

Unification of the Crystals of Sangois will secure the Behemoth in his lair for all eternity. Should they remain separate, then he shall rise to bring darkness into the world.

This unique role-playing fantasy game allows greater interaction with the environment than has ever been seen before. Argue, barter, negotiate - even lie through your teeth! The fully implemented personalities of all the characters in Bloodwych allows a rich style of role-playing that has only been dreamt of.

With one or two player simultaneous mode, this is the game that you've been waiting for. Bloodwych for those that dare!

# SPECIALS

## 12 ANIMATION SPECIAL

Steve James reports from the International Animation Festival recently held in Bristol plus news of the Computer Graphics Film Festival Award winners.

## 21 POST IT NOTES

Some further information on the postcard images wrapped around the front cover, plus a competition to win £200 worth of software.

## 22 MATERIAL GAINS

Twenty essential items to make your Christmas complete

## 116 DIGITAL PSYCHOSIS

Games like *Interphase*, and films like *'Max Headroom'* and *'Blade Runner'* all play with the ideas and imagery of cyberpunk, but the reality is much more extreme

## STEALEY'S SUMO SIM

**W**ild Bill Stealey's Microprose group has announced plans to produce a game which revolves around the flabbiest set of performers the world has ever known.

Sumo wrestling will be a component in the soon-to-be released compendium, *Oriental*

*Games*, and it's sure to be its major novelty factor.

Described by Microprose's Julia Coombes as being "in the style of Hollywood Games, but a 'kick'em where you can'", *Oriental Games* lets you play Kendo experts and Kung Fu black belts, as well as the famous fat-buttocked fighting men from

Thailand.

When pressed on the subject of whether this means that the produce will incorporate sweaty-looking sprites of truly gross proportions, Microprose commented: "We do hope so; it wouldn't be the same if they weren't".

## LEE LIVES AGAIN

**F**ollowing lengthy discussions with the Bruce Lee estate, Mindscape have secured the rights to publish the first official computer game based around the exploits of this man.

Described as "The most intelligent beat 'em up ever", *Bruce Lee Lives* will allow you to design and choreograph your own martial arts moves after you've studied and passed out of the finishing school for Jeet Kun Do, the particular martial art which was practised by Lee.

Data East published an 8-bit Bruce Lee game some years back. However, *Bruce Lee Lives* will be the first to have been endorsed by and developed with the blessing of his heirs.

The martial arts film idol, who died in the '70s, was the leading star of the decade's Kung Fu movie craze. Most of these films were based in the Far East and invariably featured a drug dealing Mr Big. The most famous was "Enter the Dragon", which brought Bruce Lee his first taste of international stardom.

## ORIGIN BLASTS OFF

**W**hile he does, in fact, look not too dissimilar to Stewart Copeland, ex of the Police, this man is the Space Rogue in Origin's new game.

The sulky looking chappy — that's who you play, by the way — is a sort of cosmic bouncer who plunders, pillages and collects bounty the galaxy over.

It sounds like the Space Rogue's a bit of a boy nacer. He pilots a Dart, outruns Corsairs and mixes with a rum old bunch which swill copious amounts of lager, sorry Rigelian Ale.

How you can manage to fly straight we aren't quite sure — but all will be revealed, as *Space Rogue* blasts off to the softshop at the end of December.

## GOTTLIEB'S STING

One of the most exciting coin-ops on show at the recent Novotel exhibition comes from a manufacturer which is far better known for producing pinball machines.

Gottlieb's *Exterminator* takes pest control to new forms of efficiency—and surrealism—as you pilot twenty digits around a maze of rooms which then proceed to SWAT the living daylight out of the bugs in the house.

From what we've seen from the game it's going to be a truly bizarre experience to see arcadeers manoeuvring disembodied hands while getting onscreen instructions such as "the wasp will sting you... don't grab it!".

This has got to be ripe for conversion. Any takers?

## UPDATES FOR HARD DRIVIN'

No sooner have they aimed for the Xmas number one than Danmark announce plans for an expansion disk, due out shortly for their contender for the top spot, *Hard Drivin'*.

*Extra Tracks* will include a number of mystery features and a new choice of scenery.

Exact details of price and content are still under wraps, but the possibility of an off-road option has been firmly ruled out. "We couldn't do anything like that," claim Danmark, making changes using the program.

## WILD STREETS

There once was a time when black panther referred to a black American freedom fighter. He would be the last person an American Federal agent would choose as a partner. Still all of that seems to have gone by the board with Titus' *Wild Streets*.

During an attempt to wipe out organized crime, the chief of intelligence has been kidnapped by the Mafia.

It is your task to find and rescue the Chief, but your only ally is a magnificent black panther, who watches your every move and who

will spring into action when things rough up. Mine! the streets of Long Island are waiting.

## SOLDIER 2000

You're in the army now. Kitted out with everything the modern hi tech combat soldier of the future should carry — you must plan your strategy, select your weapons and begin your assignment...

Artistic's RPG has you playing an avatar of the twenty-first century, and she has been kitted out with an armoured suit so awesome that she now looks like a Japanese fighting robot.

You have a choice of five mission scenarios and single or two-player modes. Fans of the genre will no doubt be shocked ally to hear that, even as we go to press, *Soldier 2000* will be shooting its way to a shop near you.

## NIGHTBREED

Clive Barker's tale of a thousand or more supernatural beings still has gathering dust in the editing suite but that hasn't halted Ocean from releasing the first screenshots from their licence of the film.

And if, or when, you finally get your hands on a copy, it's your job to become undead, all in the cause of saving the nightbreeds from the scourge of the Sons of the Free.

And you'll have the chance to be a philanthropic zombie when *Nightbreed* appears as a small screen near you next February.

## STARFLIGHT

The year is 4619. The mission: find colonizable worlds, gather minerals and ancient artefacts, and learn the secrets of alien races.

*Starflight* is a fantasy role-playing adventure which boasts a galaxy of 270 star systems and 800 planets. There are over 1.0 million

locations to be explored per planet and over 14 billion locations in all to be explored throughout the galaxy.

And if you're better at geography than maths, as Commander of an interstellar spaceship you can collate information about what lies ahead: atmosphere, mass of

planet, hydrosphere, lithosphere, temperature and global weather.

And if you get truly sick of being an anal retentive officer, you can always talk to strange new species. Electronic Arts tells us it's much better than fighting them.

# B U Z Z

## BLUE ANGELS

Out soon from Accolade comes perhaps one of the most detailed and comprehensive flight sims yet seen on 16-bit. *Blue Angels*, which is based around the exploits of the self-named US rivals to Britain's Red Arrows, not only gives you the opportunity to sink your wing tips into such mind-blowing aerial manoeuvres as the Diamond Double Barrel, the Dirty Roll, or the Solo Tuck Away Cross, but it gives you the choice of three airshows to compete in, six pilots to play, plus spectator mode, training mode and cockpit simulation.

Spectator mode lets you select and watch a pre-recorded airshow from several locations; the simulator lets you practise a manoeuvre in a flight trainer; practise manoeuvres puts you in the cockpit so you can perfect your technique — and from there on you can simulate, practise or, once qualified, fly in a real airshow, or simply free fly over the course. One of the neatest features of the game is the little cube which you can select and which projects both diagrams of the flight path you've taken and — perhaps — the one that

you should have flown.

The Blue Angels, who have been thrilling spectators for nigh on forty years, now use the FAIR with a distinctive yellow flash along the side of

the fuselage. *Accolade's* translation of their high-flying stunts is shop-bought very soon, and will be reviewed in next month's issue of CU.

# BUZZ

## OZ RULES FOOTY

**A**gain Again's *Australian Rules Football* should be the first of its kind in this half of the world.

After their recent excursions into television titles, the Pontefract-based publishers appear to be changing tack. They hope that this new form of sports simulation will score well in the sales charts and put *Australian Rules Football* slap bang on the gamester's map.

By all accounts you have to battle it out in the Outback Amateur League before qualifying for the even rougher

UFL Victorian Football League to win the coveted Victoria Cup.

Australian Rules Football has a notorious reputation for being a hard man's sport. It is also known as No Rules Football on account of its tendency to appear to the spectator as a free-for-all.

There's no doubt, however, that Again Again have been programming in some rules and regulations. This game from down under, we're told, should be bouncing toward your soft shop before the year is out.

## TINTIN ENCORE

**I**nfoimages' next Tintin tale will be *Black Island* in which the cub reporter goes on holiday to a remote Scottish island and encounters a gorilla and a band of counterfeiters.

Infoimages have acquired the rights to interpret a number of Herge's Tintin books and are looking forward to publishing a number of games based around them, but *The Crab with the Golden Claws* could well be in the running for the third

## GAINSTAR'S OLDE GOLDIE

**T**he producers of *Targhan* seem to be ever more intent on plundering the past in search for games ideas. Not content with basing their next release on ancient Greek mythology (see *Herakles*, opposite), Gainstar have announced plans for an arcade adventure set in the wild times of woolly mammoths, sabre-toothed tigers and the Tyrannosaurus Rex.

"Historical accuracy is not our main concern," a spokesman

from the company claimed. The aptly named *Dinosaurus* will number six Greek ex-gods amongst its characters. Your main opponents, however, will nevertheless be Pterodactyls, Triceratops, Stegosaurus and T Rex himself.

Gainstar claim that they have no plans to move away from this particular style of game. Described as akin to *Dungeon Master*, *Dinosaurus* will feature thirty-nine objects to discover, plus 3D definition and real time operation

## SWEEPING GREAT LICENCE

**A**lternative software's latest TV licence acquisition is none other than Sooty, Sweep and Sue. The seemingly ageless glove puppets will pop up soon in pixel form in the first of a series of Sooty games.

*Sooty and Sweep* will be on budget 8-bit with a 16-bit version planned. And it's a race against the clock as Sooty and Sue pick up their canine pal's dog bones before Master Matthew comes home and throws a wobbly.

Sweep, we're assured, will be squeaking and Sooty with be muttering incantations. There are puppets of Sue and Sooty to the twelve of you who can name another character which appears in the TV show. Answers on a postcard to the usual address.

## HERAKLES

Gambler's 3D adventure whisks you back to mythological Greece — and to action which could have come straight out of *The Clash of the Titans*.

There's a load of prime demons, three ancient gods, in a horrible fit of spleen, Aron, God of War, has thrown away *The Key to Life*. As Herakles, Son of Zeus, it's your job to find the twelve remnants of the key before the diabolical forces of chaos do.

Gambler are hoping that this game will be big. Herakles will be around in the software towards the end of January, or before you can say "Ereklai!"

## INFESTATION

Fortbouncing from *Pygmalion*, here *Infestation* comes from that well-established stable which plays upon you, the software owner's primitive fear of all things creepy and crawly.

To play the ecoom-hopping mutant who's sole aim is to wipe out all life which has a compass or equally sensitive. You're armed, of course, with cyanide gas and the general drift of the game is to give the pussie grace to the bathroom while the lights are by abominating their planet.

*Infestation* on the Amiga will be dragging your way to the end of the month.

## DARK CENTURY

Do not take prisoners... fear have escaped... now in command of several vehicles... seek out and destroy.

There's soon-to-be published *Dark Century* is a 3D ray-traced tale of vigilante in the Laser outlaws, a sort of *Death Wish* in a twenty-third century context. To the robot-car, folks, let's act like the Angel of Death.

We suspect that *Dark Century* will go for the gut not the head. But for those of you with a viciodrive streak, this just might be the ticket.

## KNIGHTS OF LEGEND

*Knights of Legend* has taken over eight years to develop, claim Origin. Why, you may ask, has it taken so long to come up with the goods? Apparently it's all in do with the fact that *Knights of Legend* will be the first RPG to offer a modular design. Four additional modules are planned, enabling you to transport your characters to widely different settings. The module system and the first scenario, *The Realm of Achelara*, are due out on both Amiga and 64 at the start of next year.

# MOVING

WITH THE

# TIMES

ANIMATION COMES OF AGE

This month has witnessed the coming of age for the computer animated film. Some of the computer movies at the recent 6-day International Animation Festival at Bristol stood head and shoulders above those which were made more traditionally. The day after the IAF finished, the Computer Graphics Film Festival Awards were held at the Odeon Marble Arch, giving the industry a chance to set its own standards. Steve James was at both...

'Broken Hearts' above and 'Ivor's Big Day', left.

**O**K, now you can hear wet tyres on the road and the squeal of brakes and the thud of the car hitting a pedestrian, so do you want to fade in the screen, or do you want to sound a bit more crisp and clear?

There was plenty of the International Animation Festival for wannabe computer film directors. You could learn how to add chills to the soundtrack of a thriller, or how to reinvent the Smurfs using the latest graphics package. On top of that there was news of what some more familiar names (Don Bluth, MTV, Snapper) were up to plus a whole new crop of talent to spot — and a seemingly endless number of

films to watch.

The most talked-about event of this eighth IAF was The Norman McLaren Memorial Lecture given by John Lasseter, who to date is the only computer artist to have been awarded an Oscar for best short animation.

Take a barrow-load of tack, the sorts of colours you'd see decking out an American store which sells jelly beans and jelly beans only, an ecocapella soundtrack by Bobby McFerrin — and you have John Lasseter's latest project: 'Knick Knack' stepped in Klitch. It concerns the frustrated attempts of a snowman in a shaver to break out of his belt and canoodle with a female ornament. It's the sort of Tweenie Pie-style cartoon

which pleases the crowds, rather than those who'd like computer animation to push back the boundaries of perception, but it's certainly a very funny film whose warmth was well noted.

Lasseter explained how he works with his programming team. 'I leave it to them to think through the technical side, just how the software will self-shade and map texture... I stick to plot, character and the visuals.' Lasseter then went on to tell me how he manages to give his work such a richly human feel. 'Most people shy away from home videos,' he told me, 'I watch them a great deal, for instance I find films people have made of their babies great for studying basic

emotions and although so far my films have been comedies now I'm moving on to longer works I'll have time for the sad bits, too.'

Rivalling Knick Knack in cuteness was another new, American short, this time Steve Goldberg's 'Locomotion'. An interpretation of the children's tale 'The Little Engine That Could', 'Locomotion' has a Wild West train as its hero which approaches a bridge that has collapsed. Should it stop, or should it keep to the timetable and jump over the gap? Needless to say it does the latter, and builds up steam as it contracts and expands in time to a hoe-down song. The squash and stretch effects used in this film represent the high-end of

*'Loopmotion'. Sugar-coated cinema, but it deserved to win the Best Film of the Year award.*

computer animation techniques

A number of the films were altogether more abstract. 'Pencil Test', by Nancy Tague, was manic and iconoclastic. 'Yan Shui', by Semina Luk Cheung, was a meditative exploration of Oriental landscape: each frame re-examining aspects of 3D sugar-loaf mountains like a visual Malibu.

Joan Stacey's 'Broken Hearts' was far more disturbing. It borrowed heavily from the nightmare scenes in Roman Polanski's 'Repulsion', where the walls of a house sprout limbs. The film dissects the death throes of a relationship. Thematically and visually, it is tense and neurotic.

Whether by design or by constraint the student entries to the festival numbered some of the sparser, more fevered plots. By far the best of these was Jamie Russell's 'Ivor's Big Day'. Running for just under four-and-a-half minutes, the film throws out a welter of images. Deep green in politics, deep house in soundtrack, 'Ivor's Big Day' is an all-out attack on the synapses while juggling with ideas of insanity and militarism.

But not all of the excitement was confined to the screenings. Matt Forrest gave a lecture on television graphics and MTV Europe held a wild and boozey party, complete with male and female belly dancers, to launch their new series of environmental

stings (see *CU* preview, June 29 issue).

The bars around Bristol's waterfront were teeming with people swapping stories and making business contacts. I spoke to one young, enterprising group who are on the verge of getting financial backing to set up the world's first interactive

electronic zoo, which based around 'Harry' Quantel technology will form the mainstay of a proposed West Country-based theme park.

The Amiga got a look in, too. Surprisingly, perhaps, a number of people were talking about the animation used in Psychosis' *Shadow of the Beast*. More were talking about the 1980s and the A500s which have recently been used in America — firstly to create an animated backdrop for a production of Shakespeare's 'The Tempest' at Sonoma State University ('The Love Story of J. Allred Puffrock' will be next), and secondly to co-ordinate a laser show at the Sea World of Texas.

amphitheatre. On the coin-op front, Sullivan Bluth Studios were around with details of *Time Warp*, the sequel to *Dragon's Lair*.

But, of course, not everything at the festival revolved around the computer. Undoubtedly the highlight of the more traditionally animated films was the UK premiere of the two-hour Japanese cyberpunk movie 'Akira' which has gone down a storm in its homeland. Veering between a Spaghetti western and a philosophical tract, 'Akira' is a full-blown, fully moving and very bloody graphic novel.

The plot concerns the exploits of a motorbike gang in the post-holocaust

*The non computer animated highlight of the IAF, 'Akira' — a cyberpunk cartoon*

# Guaranteed Window Seat.

You've got the best seat at the airshow—the cockpit of your F/A-18. And you're about to fly where only angels dare.

Blue Angels Formation Flight Simulation™ puts you wingtip-to-canopy with the acrobatic US Navy aviators who've become legends of the sky. From ground school to the wild blue yonder, you'll practice and perform over 25 actual air show maneuvers.

Train with the Blue Angels in a wire-frame flight simulator. Plot the path you've flown in 3-D against the ideal path—the maneuver.

echelon rolls and fan breaks. View the crowd during three heavenly air shows.

You can watch all of your maneuvers from a variety of camera angles: review the performance on Instant Replay—even take a bird's-eye tour of the entire airfield in "Free Flight" mode.

If you're a blue chip Blue Angel, they'll induct you into the "Pilot's Hall Of Fame." Because only the best and the brightest can take 32,000 pounds of military thrust and turn it on a dime.

Blue Angels Formation Flight Simulation. Everything you've ever experienced in flight simulation is about to take a 360-degree diamond roll.

Then dance with danger in one of four Blue Angel F/A-18s—a jet that can reach 500 knots into a 9g vertical climb.

Pierce the clouds on a wing and a prayer. Engage your formation in delta rolls left.

**ACCOLADE™**  
The best in entertainment software.®

Accolade Europe Ltd.  
Unit W, The Lombard Business Centre,  
50 Lombard Road,  
London SW11 3SU

John Lasseter's 'Knick Knack' was animated by Pixar, who previously worked on 'The Return of the Jedi'.

city of Neo Tokyo. One of the group is being taken over by a force which is linked with the shadowy figure of Akira. From there on the film is like a Shinto whodunnit. No one seems to know why the boy has been possessed, or whether Akira exists or is simply the creation of the local technocrats. If he does exist, is he spirit or is he a cyborg? 'Akira' is perfect Samurai sci-fi. It's monstrous fun, providing you can stomach a great deal of ketchup on your Sushi.

Don't get the impression, though, that the IAF is all about erubouse. Some of the most popular screenings were those run on a "Desert Island Discs" basis in which guests were invited to choose their top twelve cartoons. It wasn't surprising that many of them opted for Daffy Duck, Bugs Bunny and Tom and Jerry.

What was so impressive about the festival was just how down to earth it was. All of the film makers were approachable and the atmosphere was party-like.

It was great, too, to note people's attitudes to computer animated movies. They weren't treated as novelties, they weren't put on a pedestal — just treated on their individual merits like any other film.

#### COMPUTER GRAPHICS 89

Pipped to the post by the IAF, Bournemouth Online's Computer Graphics Film Festival Awards came toward the end of their own exhibition — of computer graphics, films and CAD/CAM — at London's Alexandra

Palace Exhibition Centre.

What you might have expected from the CGFF was to see the cream of the crop — the very, very best in computer animation. What you were given — for a ludicrous £28 — was a couple of hours of tedium and a frankly misleading idea of what the state of the art should be.

To be fair, the agenda set by the awards was much wider than the IAF's and to their credit, the judges awarded Snappers' Smarties 'Gremlins' the Commercial of the Year; similarly 'Locomotion' deserved the Festival Media Award. From that point on, however, the opinions of the panel, distinguished media critics though they were, simply seemed half-baked.

You might expect a little dryness from something called 'Study of a Nomenclature Modelled Severe Storm', you may not even be surprised to hear the odd eulogy upon the computer's potential. You do get worried, however, when the audience starts to laugh at the prize-winning films.

There seemed to be two hidden assumptions in the selection. Computer animated films are successful if they can out-Disney Walt, or secondly if they serve as symbols of mankind's technical prowess and are accompanied by semi-religious narration full of sparsely scientific junk.

The Special Animation Award (the festival's golden globe) was a case in point. Runner up was 'Pans 1789' (the French Revolution but only as Jimmy Chixel could see it). The

winner was 'Imagination' by the Links Corporation of America (little balls of light form jellyfish, form bigger fish, form humans who take off into space to find the eternal truths of the cosmos).

From the tower of science built upon the dreams and genius of Man, new horrors stretch, seemingly endless and enticing, the trust and belief in Imagination, that eternal hope which captures us — and we may even reach the stars! It may be OK for a US President, but if

that's good enough for best computer animation of 1989 then I'm my own mother's hat.

The IAF provided an excellent forum for computer animation by letting it stand on its own two feet. The CGFF was outmoded. If computer animation is to continue to grow as a recognisable artistic form then it shouldn't be treated like a pure and mutated greenhouse plant.

Otherwise, as was visible at the CGFF, it is in danger of becoming bankrupt.

*The title sequence for the IAF was also joint winner of the Best Title award at Bournemouth Online's Computer Graphics Film Festival Awards.*

# DEMOS

A fuller postbag this month including some neat mega demos. Thanks to all those who sent in their wares particularly 17 Bit and Wicked. Any groups attending the Christmas Commodore Show should bring their demos along so we can get them in the next issue. Anyone wishing to mail stuff to us should send it Demos, CU, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

**MOVIESHOW:** An inventive little devil of a demo from Prime Evil featuring black and white clips from films. Pictured is the gopher from Caddyshack, but there's also Annie in the Running Man, Karate Kid, Flight Of The Navigator and Blue Thunder. Apparently there are more disks to come.

**MEGADemo:** Another two disk job from Red Sector featuring the ubiquitous Eddie, copious amounts of scrolls, flying legos, samples and beet of all, at the end, a sub section composed of vector balls, all of which come together to form patterns, shapes and characters.

# DEMONS

**MEGADÉMO:** Another one, this time from Britain's RAF which opens with a nice lightning effect burning the logo on the screen. Neatest touch of all is the commercial break with a revolving Coke can. Do Coka need the publicity, though?

**PUGGS IN SPACE:** Held over from last month when the disk mysteriously disappeared is Dyonysius' little tale of one unlucky alien and his unhappy trip to Earth. Word has it that Psychocals have stepped in and snapped this up for a game because they were so impressed.

#### SPACE ACE — EMPIRE

The sequel to *Dragon's Lair* is due to appear at any moment. Like its predecessor it will have superb graphics with over forty screens of action as Ace pursues the evil commander Bort, girlfriend stealer and inventor of the lair-like play.

#### SHADOW OF THE BEAST — PSYGNOSIS

Not just a piece of pretty expensive packaging, as a cruelly disfigured beast stalks through 350 screens of lavishly drawn action is an attempt to take revenge on the evil lords responsible.

#### FUTURE WARS — PALACE/DELPHINE

How does a window cleaner end up transported to an alien invasion in the year 1304? Ask French software Delphine who are responsible for programming this interactive adventure with visually exciting graphics and thoroughly absorbing gameplay. It's reviewed this issue.

#### UNREAL — UBISOFT

As ever the plot makes as much sense as an Albanian in Oxford Street but Ubisoft's next release is pretty enough. It concerns two characters called Prager and Isabelle travelling to the land of Unreal.

# POST IT NOTES

WIN  
£200  
OF SOFTWARE

What more could you ask for then to start the new year with two-hundred smackers worth of your favourite games?

All you have to do is write down your name and address, together with the make of machine you own on one of the postcards, then send it to Dirty Postcards II, CU, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU. First out the bag wins.

ompo

#### THE LOST PATROL — OCEAN

Given away as a demo on the front of last month's CU The Lost Patrol is Ocean's first foray into the world of interactive movies. The still used comes from one of the interlude screens which materialises as you try to guide your patrol back to base.

#### DRAGON'S BREATH — PALACE

The quest for immortality is at the heart of Palace's next game. Due to be released in the New Year *Dragon's Breath* concerns the attempts of three characters to reach the throne room of a great castle wherein the secret is contained. It's a strategy game with trading elements.

#### BLADE WARRIOR — MIRRORSOFT

Originally called *Paladin*, *Blade Warrior* concerns the tale of a knight searching for a magical sword which will kill a source of great evil. It's a fantasy game with next multi-frame illustrations like the still shown, which betray the programmers' background in film animation. Review next month.

#### WEIRD DREAMS — RAINBIRD

Reviewed this issue, *Weird Dreams* is the disturbed tale of a man's hallucinations whilst unconscious on the operating table.

Clockwise from wooden attache case (£85 from Roxie), The Star Wars video trilogy (£39.95 Virgin Megastore), 502 memory expansion, crucial for playing H Cane From The Desert and using D Paint (£120 from all Commodore dealers); Star Trek compendium (£7.95 Virgin); Beat Of Sunday Sport (£3.50 Virgin); D Paint III (£9.95 Electronic Arts); CU polo shirt (£8.99 from us); metal Mustang aeroplane/lighter (£34.95 Roxie); Tin Tin T-shirt (£8.95 Pilot); Moonraker keyring (£3.95 Pilot); Goals Galore—110 goals from last season (£9.99 Virgin); Roger Rabbit (rental only but still a must); The Fly (£9.99 Virgin); Viz Calendar (£4.95 Virgin/Viz newsletter); Maltese Cross socks (£4.99 Sock Shop); Cruiser joystick (Powerplay); De La Soul 3 High And Rising LP (£7.95 Virgin); Satellite pen (Roxie £19.95). # ◆◆ VIRGIN'S SANTA ◆◆

FREE  
GAMES  
THIS  
WAY

Don't miss out on an extra special stocking this Christmas when Santa will be awarding the lucky winners with:

#### 5 FIRST PRIZES OF

£1,000 worth of software of your choice, or an Amiga or ST plus £500 worth of software of your choice

#### 10 SECONO PRIZES OF

£500 worth of software of your choice

#### 20 THIRO PRIZES OF

£250 worth of software of your choice

#### 1000 RUNNER UP PRIZES TOO!

Any one of the six Virgin Games arcade classics mentioned below

**MAKE SURE SANTA  
VISITS YOU  
TWICE THIS YEAR!**

HERE WE GO! ....

Virgin Games have decided to become a Santa Claus and out £30,000 worth of fabulous goodies. All you have to do to gain from Santa's generosity is to buy any three of these games.

SHINOBI

DOUBLE DRAGON II

GEMINI WING

CONTINENTAL CIRCUS

SILKWORM

NINJA WARRIORS

WIN  
£30,000  
WORTH  
OF  
PRIZES

Simply collect three tokens - you'll find one in each game - and send them to Virgin Games. The prizadraw will take place on 29th January 1990.

# discover why!

## SHINOBI

You're masashi, a tough ninja warrior on a mission to clear the town from rebel martial arts fanatics. Explore the scrolling urban landscape and beat the hell out of your opponents, but watch out for the end of level guardians.

## SILKWORM

It's not true! Even after months of negotiation with the Ruskies and despite a mass exodus out of Afghanistan,

we're still under threat. There's no one left to press the Nuke button so the battle has switched to copters and plane. Non stop shoot-'em-up arcade action.

## CONTINENTAL CIRCUS

Complete in formula one races in Brazil, America, France, Monaco, Germany,

Spain and Japan. Race hard, but watch out for other cars that are as fast as you. And do, do, do, for fuel and repairs.

## GEMINI WING

The aliens have had enough. They're not going to take their brains easily blasted on computer screen any more. So they've come down in their horrendous, fast the pitiful realm of carbon-based life forms called humans. Can you stop them? Somebody has to do it.

## NINJA WARRIORS

Can you survive brutal enemy onslaught? Fight with hand, foot and dagger to rid the streets of an army that have infested your home town. A classic arcade conversion.

COMING SOON!

## DOUBLE DRAGON II

Ferocious two-player simultaneous martial arts mayhem. Evil Bends have captured your girlfriend - it's up to you and your brother to rescue her. Don't fail. Through the town, countryside, mountains... and finally into the lair. Use whatever weapons you can find to stay alive.

#### 64 UPDATE

This is what the game should be like — high quality graphics, fast scrolling, excellent sound and a multitude of features.

Journey from New York to Los Angeles in sixteen stages. En route you face storms, wet roads, snow flurries and innumerable other cars, including the white Porcha, whose driver steals your girlfriend should he beat you in a stage.

Visually, Turbo Outrun 64 is extremely impressive. The graphics are well drawn, update fast and manage to retain the feel of the arcade version. Accompanying the graphics are several impressive tunes, each with its own style and very rarely repetitive.

Every now and then you get the option to change your tyres or improve your engine or turbo, with little mechanics obligingly shown attaching the parts to your car. At the end of the game you are shown a map charting your progress across America, again featuring excellent graphics.

In complete contrast to Turbo on the Amiga, the 64 version provides a fast fun game and conversation that will even please the sceptics. Price: £39.99 cassette and £14.99 disk.

65%

**O**utrun's diggers out time I'm afraid to say. The Amiga version of Turbo Outrun, potential conversion of the year, has turned out to be nothing more than an over-hyped piece of average software.

The graphics are all very nice, nice that is until they start moving; but the speed that the graphics update at barely rivals the 64 version.

The gameplay also falls pretty much flat on its face. If you're on a level with an icy road you don't expect good road handling; but I think this has been taken just a little too far when you can predict which corners you're going to career off.

On the positive side, all sixteen levels have been included, each with its own sound track. The open top Ferrari, our hero and heroine terrorising the highways have been faithfully recreated, right down to the sparking turbo. You still have the choice between manual gear change (fire to change gear up or down, and space for the turbo), or auto gear change and the fire button for the turbo.

Despite all this (which adds up to a pretty incomplete package), Turbo Outrun will undoubtedly end up a Christmas number 1, or close to it, just on the strength of name and licence. Sad when you look at other more deserving products.

Mark Patterson

# Gazza's SUPER SOCCER

Paul  
Gosling

## GAZZA'S SUPER SOCCER - SIMPLY SENSATIONAL

- ⊗ Superb fast action gameplay featuring real teams from the Football Leagues
- ⊗ Each team defined with the correct strips.
- ⊗ Create your own superleagues, cup competitions and build your strongest squad
- ⊗ Each player in the team has his own characteristics- skill level, speed and style of play. The skill level of your team can be improved through playing well
- ⊗ Realistic ball control allowing you to chip over, curl round or dribble through the opposition. The unique "Boot-O-Meter" enables you to vary the strength, height and spin of any kick.
- ⊗ Full control of corners, free kicks and goal kicks
- ⊗ Heading, tackling and fouling
- ⊗ Full, realistic control of goalkeepers
- ⊗ Superb one or two player action
- ⊗ Play in a whole range of leagues, cup and practice matches or just practice penalties, free kicks and corners

The Country's most exciting computer game, endorsed by the country's most exciting player!

"Don't forget, buy Gazza's Super Soccer. It's the No 1 Computer Game"

Available for Amiga, Atari ST, Spectrum, Amstrad and C64

# WIN!

**H**ave you ever been told that you're missing out up top? Or has the neighbour ever asked you if you've seen what's on his roof?

Soon you could be competing with his merry banter, courtesy of USG, by winning an Astra compatible satellite dish and receiver. The system is manufactured by Alba and will allow you to tune into the SKY network.

How do you get your griffs on it? Easy. By answering the following questions:

- 1) Who is the sometime female presenter of "Sky at Night"?
- 2) Where is the Royal Observatory?
- 3) What is the name of the WWII fighter ace (and childhood hero of adman, Thomas Glenister) whose daring exploits were chronicled in the movie "Reach for the Sky"?

Answers on a postcard, by 5th January 1990 to: CU Satellite Dish Compo, CU, Priory Court, 30-32 Ferringham Lane, London EC1R 3AU. Twenty runners up with each win a copy of *Outrun Turbo 64* or Amiga. Please specify computer/driver.

# CU Compo

A TRUE THREE-DIMENSIONAL WORLD  
PRESENTED ON THE SCREEN!

EXCITING STUNT TRACK  
WITH A 360-DEGREE LOOP!

QUALIFY AND  
BECOME THE TOP HARD DRIVER!

# Hard

THE ULTIMATE DRIVING SIMULATOR

— that leaves all other driving games behind!

How would you like to test drive a high powered sports car on a stunt course? Have you ever jumped a draw bridge or driven a loop-the-loop? Now's your chance!

Or maybe high-speed driving is your idea of excitement. Step on the gas and try to keep control while skidding round the corners, weave in and out of the traffic and avoid oncoming cars!

Hard Drivin', available for your home computer, is not just the best game on offer — it's a whole new driving experience.

SCREEN  
SCENE

Michael Jackson's fantasy: a huge, white rabbit, a V2 rocket and a marionette.

# MOONWALKER

**M**ichael J. seems to have done rather well for himself. At 21, is it that wacky to earn over sixty million in a year? This should be enough to tell us that *Moonwalker*, the movie, wasn't made for financial gain, but more likely as an ego trip.

The first level finds Michael trapped on a movie set being pursued by hordes of fans. His only means of escape is to disguise himself as a rabbit. En route Michael must also collect film equipment and run over packets of drugs left behind by the evil Drug Baron.

Next MJ has to collect crystals in order to transform himself into a super-powered spottis car. Another maze section follows, also featuring small, not particu-

larly imaginative, graphics.

Stage three is the famous Thin Lizzy night club (as featured in the *Smooth Criminal* video). Now Michael has to collect a gun and sensibly mess with the bad guys. As they appear at the windows they have to be shot. At the end of this level the Drug Baron kidnaps Michael's Inland Katy and runs into the next level.

Finally Michael transforms into a robot for the final face off with the Drug Baron. This time he is up against a small army of hoodlums and the Baron's massive laser cannon. If he survives all that, Michael transforms once more and whisks off into the sunset.

Each level is accompanied by nice, if somewhat repetitive, samples from the album — one feature which helps to save the game, whilst between each section is a short animated cartoon sequence outlining the plot. They're so well done though, that they tend to overshadow the levels themselves.

Licensing a film like *Moonwalker* would have been a big, not to mention expensive, task for any body. And US Gold have done surprisingly well considering the overall limited scope for a game, and the legal restrictions from Jackson's lawyer. They insisted for instance, that the graphics in one

scene be changed, Michael is very proud of the fact that he can move about on lip toes, so the Jackson estate made sure that this remarkable event was captured on the software.

My overall impression of the game is that it's limited. The first two sections are almost identical, while the last two follow very similar lines.

This will go down well with fans of the film and the artist, but for the rest of us it's a miss.

# DOUBLE DRAGON II

**W**hen the first conversion of *Double Dragon* appeared this time last year, it was received with almost uniformly awful reviews. Readers voted it one of the worst games of the year. Disappointment was evident because expectations were high.

The appearance and subsequent licensing of *Double Dragon II* gave Virgin another chance to produce a game which does the coin-op justice and this time they've made a better fist of it.

The first thing that stinks you about Binary Design's conversion is the full screen image, which helps retain the feel of the arcade original.

There's little to separate the first *Double Dragon* from its successor. It's another horizontally scrolling beat 'em up much in the same mould with you battling your way through henchmen, with a variety of weapons such as chains and knives.

The game loads in section by section, not just between levels, but also midway through. This can catch you unawares, particularly as you begin level two, since the first thing that happens is that you receive a smack in the mouth because you materialise right in front of an extremely large bit of muscle. Nevertheless there's no doubt which game you are playing

A wallop.

from the moment you begin as the two characters (instantly recognisable because they dress so badly) begin their cross screen surge.

The action is furious enough, although at many points characters seem to behave peculiarly mainly because of untidy bits of programming. Some opponents

stick on ladders invitingly, allowing you to thrash them with lumps of chain without fear of retaliation, others jump off upper levels suddenly, and indeed a whole gang can be induced to hurt themselves from the top of the machinery like lemmings.

Whilst *Double Dragon II* is good

fun, particularly in two player mode, it's the kind of game with which you can't help picking faults. These faults are particularly glaring once placed next to *Ninjaboy* which is polished in comparison. The sound in *Double Dragon II* is messy with exclamations from battered baddies which sound like hicups, and the backdrops in some places are extraordinarily flat. Witness the end of the third level where the field full of cows looks like a bad attempt at cubism.

These criticisms are not to suggest *DDII* is unplayable because it's not, there's still a lot of fun to be had playing this conversion, merely that it's not the game it should have been.

# HARD DRIVIN'

**I**t's been a year when racing games truly found favour again both in the arcades and, subsequently at home. The Amiga has seen a steady stream of conversions and original games, with the latter, in the shape of *RVF* and *Stunt Car*

taking the chequered flag for quality. Now we have a conversion to rank with them.

*Hard Drivin'* must be one of the most hotly fancied games to top the charts this Christmas. It's been number 1 in the arcades for months due to its realistic blend of simulation and arcade thrills.

When machines like *Turbo Out-*

*run* and *Monaco GP* concentrated solely on the racing aspect of their appeal, Aten's coin-op attempted quite successfully to emulate the feel of controlling a motor vehicle at high speed. Its colourful 3D graphics enhanced the sensation more than usefully.

The idea is to control your vehicle around two routes, the

**Domark/Tengen**  
**Price: £19.99**

# AMIGA

## SCREEN SCENE

By the shed, yes, it's the cow.

speed track and the slant track, against the clock. The ultimate goal is to qualify for a championship lap against the mysterious Phantom Photon, a ghostly blue turbocharger that's not prepared to concede the title of top Hard Drivin' without a fight.

Domark's conversion will come as a relief to fans of the coin-op — it's extremely impressive. Graphically it's nearly a replica, partly due to the fact that the backgrounds from the original have been downloaded, but also due to

Ploughing into the bridge

## COMPO

These 1/18 scale, radio-controlled roadsters won't be winning the next 24-hour championships, but they will career quite nicely across the park.

Based upon the new Ferrari F-40, there's one to be won for the first five who correctly answer the following: Who has started more Grand Prix's in pole position than any other racer?

Answers on a postcard to Hard Drivin' Compo, CU, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU, by 8th January 1990.

the attention to detail which has gone into this race which have all been redrawn from sketches, right down to the cow standing by the shed at the beginning of the slant track. Programmer Jurgen Friedrich who was responsible for the 16 bit versions of Star Wars has got his maths right again with six smooth scrolling and fast updates. The sound too is particularly strong with many of the original effects sampled and a particularly punchy original introduction tune.

As a game I have my reservations about Hard Drivin'. Despite its undeniable quality, its realism

is such that it's always reminded me slightly of a drive down to the supermarket — well on the speed track anyway there aren't any loops on the Finchley Road. Nevertheless on the home computer it translates even better. The new thrills of Slant Car aren't there, but these are replaced by an extremely absorbing challenge.

There can be little doubt given the quality of this conversion, and that it won't be up there challenging for the top spot from the moment of its release.

SCENE*The hole in wall's in your favour*

# COMMANDO

*The cover looks nice but it could be a trap*

**W**hen you boot *Commando* you're loading a piece of history. Back in '84 it became an instant hit with all arcadesluts. Then Elite made it one of the first-ever home computer licences. The idea behind the

game was as simple as it was revolutionary. Guide your GI through six vertically scrolling levels, kill everyone you meet, rescue a few prisoners and cause as much mayhem as possible.

The 64 version included some fantastic pieces of music and excellent graphics. The only trouble was that it was outrageously hard. Unfortunately the Amiga version has lost a lot in translation.

The difficulty has gone. It's now too easy to complete a level. Graphically the game has been toned down: you are no longer the rough-edged blood and mud characters of the 64, instead you get nice clean sprites. Unfortunately, the music has lost all its strength, now it has wimpy spot effects and seems wasteful of a sound chip. Worst of all your grenades can only be thrown forward, so you tend to be better off with just your trusty machine gun.

I was generally disappointed with this version. It lacks the feel that made the action frantic in the original. Add its age to this and even this classic begins to look more than slightly dated. Still, a definite lot of kilt-crazy Commandos. It's jam-packed with ketchup, but if you're after a healthy shoot 'em up you might choose something else.

# Player Manager

BINO DINI

BRINGS THE QUALITY OF KICK OFF TO THE ART OF MANAGEMENT

Play the BEST soccer simulation. Blistering Pace - Pixel Perfect Passing. Unique facility to design your own TACTICS. Over 1000 individual players each with a unique combination of attributes. Haggling lively transfer market. Haggling for the best deal. Camera on the ball or any player on the field. Save game facility. League and Cup.

Bring Back The Glory Days, the brief of the newly appointed PLAYER MANAGER, an International class player, as he takes charge of a third division club. His success depends on four distinct aspects of the game.

retain pace, fitness and play. Play in your position. The first option combined with play havoc in the opposition.

## MANAGERIAL SKILLS

Devising winning tactics; with skills from the Transfer market and using a well balanced team is the test of his Managerial skills. When to hang his boots up is the toughest decision he has to make.

## TACTICS

Four well proven tactics are provided to suit most situations but you can design your own tactics. See the tactics in action using the Ray race.

## Each of the following PASSING, CATION, SKILL.

These are Age, Mental and Experience, Weight. There are several other factors: disciplinary points, available players.

HEIGHT

Other factors like referees, injuries, disciplinary problems, team morale etc, can lay to waste the best laid plans of a manager. The PLAYER MANAGER brings everyday realities of a Manager's life, his talents as a manager and a player into a sharp FOCUS. THE FOCUS IS ON YOU.

# FUTU

*The very pretty opening task.*

*When you go down to the woods today.*

**W**hen it comes to producing the fabbed interactive Movie, all credit has so far gone to Cinemaware. With sophisticated graphics and sound, titles such as *Lords Of The Rising Sun* and *Defender Of The Crown* wrote their own page in the annals

of software's history. Unfortunately everything with these games followed a set path with one or two 'movie' interludes. On the other hand, American software house Sierra have been beavering away on their own style of interactive movies, namely the *Police Quest* and *Space Quest* series. Though the graphics and sound were both on the poor side, Sierra products featured animated sequences following on from player actions, spiced with humour and puzzle elements. *Future Wars* takes off from where Sierra apparently stopped, its almost second generation in much the same vein.

You start off as a low window cleaner high up on the outside of a sky scraper. The introductory sequence shows him accidentally knocking his bucket over and taking a milking from his boss.

*Fourteenth century Europe has been invaded from outer space*

Half-closing the window behind him the boss drags back into the seclusion of his office leaving you to ponder your next move.

All the in-game orders are issued through a menu of just five commands and cursor to move

the main character. Quite basic, but all the objects and puzzles are designed around that method making the game smoother to play.

The problems you are faced with range from lanky to obvious,

**Delphine**  
**Price: £24.99**

# URE WARS

AMIGA

SCREEN  
SCENE

just a small amount of lateral thought is required. For instance, the first real problem is how to stop your boss catching you outside his office. Simply take the bucket to the WC, lift it up at the sink and balance it on his half-

open door. When he comes out the bucket crashes on his head and the computer quickly takes you to the safety of the next room.

There is a plot. The Earth has been under attack for many years now, but thanks to the SDI system she's held her own against the aliens. Two scientists discover that the aliens have gone back in time and landed in the year 1304. What this has to do with you isn't made clear, so it leaves plenty of room for discovery.

Future Wars has some excellent animated sequences, gorgeous backdrops and a multitude of problems and characters to face. All backed up with sampled sound effects and the simple control method. A perfect game for the long winter months.

Mark Patterson

## CD WARS

As well as producing software Delphine have a successful record label with Richard Claydeman as their principal artist. Not satisfied with writing and producing the soundtrack for the game Jean Bauldiot also re-mastered and re-recorded them to CD. As luck might have it we have 6 of these ultra-limited edition CD's to give away. Just answer these simple questions.

What was Delphine's previous Amiga release?

In which French city is De-

lphine based?

# C64

## SCREEN SCENE

Inside the planet

# RETROGRADE

Facing up to the guardian.

**R**etrograde isn't, as you might think, a simulation about oil (gosh, that hadn't occurred to me Tony — Ed). It is, in fact, the story of one man's fight against oppression. Nothing too original about that, and, in fact this game owes much to previous incarnations like *Sideways*. It's a pretty solid shoot 'em up of a kind that's becoming increasingly rare on the 64.

As you can probably tell from the screenshots, the planets are a bit heavily occupied, and everybody is out to get you.

You begin the game armed with a jet pack and a crappy gun. You can improve your weaponry system by flying down to ground level and popping into one of the shops you find dotted about. As you shoot bad guys, they leave money with which you can buy extra weapons, which you can use to shoot more and more bad guys, to make even more money to get even better weapons. It's an easy circle to break into.

When you think you have strong enough weaponry, it's time to

attack the planet's core. Race along the floor beating up all the soldiers you find until one of them drops a planetbomber (a very large bomb), go back to the shop and pay an extortionate amount of money to have the bomb primed, and then jump into a duct, which will enable you to fight your way through even more guards and deposit the bomb at the bottom of the shaft. Do this to all the shafts and the planet will blow up, allowing you to face the evil oppressors.

I'd say *Retrograde* is decidedly average. Graphically it's nothing spectacular. It has pretty small sprites, only a few of them single coloured, and what looks like the same scrolling routine as *Dropzone*.

It doesn't play spectacularly either. The controls are just a little too slow for a fast-paced game, and the inertia doesn't help much either.

It seems to me that the programmers have taken *Dropzone* and merged it with *Morpheus*, and the end result is far from brilliant. Not a bad product, but not exactly a record breaker.

# STUNT CAR

Negotiate the smaller ramp.

**S**ince *Enduro Racer* made its debut in the arcades, almost every single racing game has had a hill or two added to try and make your stomach churn. To be honest, none of them really have succeeded, until now. Here we have a product that will not only have you on the edge of your seat, but will also keep your stomach churning, as your guts tell you that you shouldn't be doing what your eyes are telling you you're doing. *Stunt Car* is that good.

If your attitude to race games is "seen one, seen 'em all", then look again. *Stunt Car* is the race of the future. The tracks you race on have been specially designed for high speed runs. The bends have been banked, which means you don't have to slow down. The interesting thing about the courses is that at no point do they

## 64 UPDATE

*Stunt Car* 64 is, difficult though it may seem, virtually identical to the Amiga. The main difference being that the tracks and other cars are composed of faster hidden line vectors rather than the filled type. Also, almost all the colour has been removed from the roadway, making it look slightly more like a Spec-

trum game than a 64 game but this isn't a bad thing at all, because it plays brilliantly.

Probably most remarkable is that the "cockpit" has been copied identically, right down to the two front wheels that bob around when you move in almost perfect imitation of the Amiga.

A conversion in the true

# AR RACER

lie way across with every knock, until it reaches the far right of the screen, at which point your car falls apart and is considered a wreck.

I've said it before but the graphics are incredible, and that doesn't only apply to the movement of the track in relation to you. The other buggies are amazing to watch, too. It's almost worth losing the race so that you can follow the other car along the track, watching it bounce around realistically. Sound too, provides some of the most realistic revving and acceleration noises yet heard.

But that's not all. There's plenty of other additions—like the facility to link up your Amiga with a friend, either Amiga or ST owner, and have a head-to-head race via a modem link. Or the league option. You start the game bottom of division four, with other drivers (computer controlled) in your division. You have to race the computer cars over the two tracks assigned to your division, and gain enough points to be promoted to the next division.

An amazing game, almost perfect in fact. A must buy for all Amiga owners.

Tony Dillon

come any lower than twenty feet from the ground. In fact, some of the 'hills' reach between eighty and one-hundred-and-twenty feet, so racing is pretty hair raising stuff.

Comparable to Domark's *Hard Drivin'* SC is made up of filled vectors, and very nice they look too. The track is a huge gray strip

raised high above a lush green lawn, and as you speed along over the bumps and hills the ride can only be described as exhilarating. If you were lucky enough to see the game in action on Micropro's miniature stand at the PC show this year, you'll remember the gasps as people found themselves glued to the oversized

monitors. And excitement is what gives this game its winning edge.

Geoff Hammond (remember him, the author of *Revs?*) has done an amazing job on the maths involved in getting both the handling of the buggy and the response to gravity just right. *Interia* works perfectly, and you realise after the first time you try it that racing up a hill at full pelt with your finger on the thrust button isn't a good idea. You suddenly run out of road to race on and plummet downward, rejoining the track with a nasty smash up.

Crashing isn't advised, it has to be said. Everytime you do anything to damage the car a crack appears on the left hand side of the windscreen. It gradually works

crazy headpiece*

**I**f anything *Xenophobe* could quite easily win package quota of the year. On the front of the box, in big white letters, is the highly inventive 'Exterminate the aliens', a hard sell wintier in my books. Still, it's accurate, it's not inspiring all the same. In *Xenophobe* it's your job to go solo or with a buddy, to board alien-infested space vessels and bases to purge them.

The first procedure is to swap disks, yes there's two of them.

# XENOPHOBE

Follow this by selecting your character(s). An ensuing graphics sequence introduces you to the new location.

Step out of the teleporter and you're instantly confronted by outcasts from 'Aliens'. Pods burst open to release Critters, who then wrap themselves around various parts of your body. Rollerbaby's roll and flatten you, then jump on your face for good measure. Tentacles reach out and smother you; the grossly named Snotterpiars fire a certain mucus-like sub-

stance in your direction. And, finally, Fastore hide themselves around corners until you're in range — then reveal themselves while throwing objects at you.

In order to complete a level you have to destroy a set percentage of the aliens, before the ship self destructs. If you come across the terminal and hit the relevant switch the self destruct countdown is delayed and gives you more time for blasting.

This is only a slightly better conversion than the 64 version. It

features a very standard soundtrack, beefed up with samples, and some pretty basic graphics. *Xenophobe* Amiga is pretty average, but will be sought after by fans of the original.

Tentative for the croc.

# TOOBIN'

**O**ne of the more original coin-ops to appear last year was Atari's *Toobin'*, based on that decidedly uncommon sport of sitting in an old motor tyre and shooting down rivers. In this country that's probably about as healthy as drinking raw sewage given the state of our waterways but that didn't stop it being a cute idea for a game.

*Toobin'* turned out to be surprisingly playable. I remember the first time I saw it I nearly walked past because it looked like one of those children's novelty games. It's true there's nothing to collaborate, beef up or rip apart, but hey, give it a chance!

The idea behind *Toobin'* is for one or two players to guide their characters down the river, through rapid, dangerous waters, and un-

pleasant assaults to the end. One point automatically in its favour is that this provides you with the opportunity to play a black character should you want — something all too rare in gaming.

The hazards you'll face on route are many and you'll find yourself faced by thorny bushes, fallen trees floating across your path, and later mines and submarines. On the bank fisherman cast rods with tyre piercing hooks, hunters fire guns indiscriminately and yobs lob bottles. Heng around too long trying to negotiate certain sections and a bloody great crocodile charges up behind you and takes a bit out of your inner tube. Nasty.

To ward off the nasties on the bank and clear obstacles from your path you can throw coke cans. Points are most easily scored by directing your bathos through the gales which are dotted around the course. If you make it through one cleanly you get the score that it shows; otherwise bumping into them will halve the amount each time. Negotiating a gate is a good way of getting rid of the croc, too.

Domark's conversion is pretty faithful to the original, although I'd argue that it's a touch more frenetic than the arcade version. There's little time to dwell around, and lobbing coke cans — which

Approaching the white water.

takes care and accuracy — can just be too time consuming. Graphically it's pretty and recognisably close to the arcade *Toobin'*, although the flowing of water, something rarely well reproduced in games, is once again less than realistic. Sound is limited for the most part to spot effects, but there is a neat little steel band tune as the game loads.

*Toobin'* is prime conversion material and Domark have reproduced an arcade

game that does justice to the original. It's fun and addictive to play, and whilst I don't see it threatening the bigger names (including their own *Hard Drivin'*) for top chart positions I hope it does well. Aren't I nice?

AMIGA

"BEST  
OF THE BEST"

**T**o most of CU's readership the name *Sim City* means nothing. To a few it represents one of the most amazing pieces of software yet to appear. It not only dazzled people at the massive Consumer Electronic Show in America, it also managed a staggering sixteen page write up in Japan's biggest computer mag, *Logi'n*. Unfortunately, in its original state, *Sim City* would only run on one Meg Amiga and was totally unavailable in this country.

At last somebody decided that it just might be a good idea to release it in the UK. So with a couple of minor changes enabling it to run on unexpended machines, here it is.

*Sim City* gives you a chance to go one step further than the deity you played in *Populous* — it lets you become a politician. You're given a nice plot of land, twenty thousand bucks and freedom to do what ever you want. I christened my piece of wasteland Happy Valley II (in memory of Happy Valley which went under in an earth quake on my imported version).

The first thing to do is to get a population. I established a nice residential area and linked it to the power grid.

Following that I linked industry to the power grid. Creating a motorway proved no problem and I soon had a growing economy. As with any good city it needed department stores; the addition of some commercial zones was welcomed by the Happy Vallien's. And so my first year in office came to a close.

The economy was only running slightly in the red, but the polls showed that crime was an increasing problem. To combat this I had a police station built, and upped the taxes to 9% to help fund it.

Five years later and Happy Val-

A larnade blows, below, and Godzilla's on the loose, above

# SIM CITY

Overview shows yet another disaster.

ley II had a population of 20,000, a sea port and a footy stadium. Even with a railway, public opinion showed my popularity dwindling in the face of congested road ways. I embarked on building my version of the M25 Orbital. Like most great motorways it ran out of money half way through construction. Still the effort paid off and the people went back to moaning about pollution and the taxes.

Twenty years after that and I have a continually expanding city, a healthy economy, lots of lovely happy people, and most of the industry has moved out to the countryside. However...

It wasn't my fault the nuclear reactor suffered a meltdown. Only half the city was rendered unsalvageable, I thought nuclear power was supposed to be safe and clean. With ten thousand people and millions of dollars worth of real estate written off, it looks like it's time for Happy Valley III.

If you don't really want to take the risk of losing your city in a major disaster you can purchase reclamation on one of a pre-built town. They give you a set amount of time to clear up flooding, fires, or disasters — the works.

This is an excellent game which has already written itself in the pages of computer history. It's already been accepted as an essential study tool for students of architecture and urban studies in certain US universities. But don't assume that means *Sim City* is an egg head's game. It's a fun, addictive, original and amazing.

**T**he recent spate of football games in the arcades has given rise to Activision's latest conversion, *Fighting Soccer*. Like its arcade counterpart the action is viewed from above and the screen scrolls to keep the ball central. You have a team of five players of which you control the one nearest to the ball. The idea of the game is to win an Olympic Gold Medal by beating your opponents in a knock-out tournament.

You can use all the normal football skills: dribbling, shooting and heading but what makes *Fighting Soccer* different is that you can also foul your opponents. If you decide that an Olympic medal is worth a bit of foul play then you'd better watch out for the ever vigilant referee.

As we've come to expect of Activision the graphics are very good, everything is nicely drawn and reasonably animated. Good use of colour also enhances the appearance of the game. Because the action is viewed from above, when a player jumps or the ball leaves the ground, they get larger to give the effect of getting closer to the screen — a nice touch and very effective.

Sound comes in small doses but what little there is is quite good, all the normal football noises are present except for one glaring omission — there's no crowd noise. The referee's comments are digitised but they're less understandable than a British Ref announcement.

The strange control system makes it nice and easy to pass, dribble and shoot but almost impossible to head or foul. Since heading and fouling are two of the game's main features I was disappointed not to be able to use them properly. Another minus point is the size of the pitch — it's just too small, all ten players seem

# FIGHTING SOCCER

to converge on the screen at once making it extremely difficult to keep any control over the ball. With a lot of practice it gets a little easier, but not much.

Because of the difficulty factor many people will give up after a few plays, real soccer fans with lots of perseverance may get some enjoyment from *Fighting Soccer* but I think that the repetitive nature of the game may even get to them after a while.

If Activision hoped to net a winner with *Fighting Soccer* then this effort is well wide of the posts.

# THE NINJA WAR

*Duck — it's chilly breath.*

AMIGA

SCREEN  
SCENE

A warrior reduced to a metallic android by the fire-breather fights on.

# NINJA WARRIORS

**W**hen you see a game that looks and plays like *The Ninja Warriors* it's infuriating. If you consider the number of wasted arcade licences you see in any one year it's difficult to see how anyone can have an excuse for not turning in something of this quality.

Not only is *The Ninja Warriors* a faithful conversion it's near perfect. The last time we said that was when we saw *Sikworm*. It should come as no surprise that that not only is the same company responsible, but the same prog-

rammers are involved.

Back in May we picked out *Sikworm* as an early front runner for conversion of the year. With that feather tucked firmly in their caps Dutch coders Ronald Pieket, Weeserik and John Croudy have been slaving over *The Ninja Warriors* attempting to go one better. It seems they have.

Like *Sikworm*, *The Ninja Warriors* is hardly a big name arcade licence. It's probably better known for its three screen monitor set up rather than the originality of its gameplay. This is a sensible move on the part of The Sales Curve and one that pays dividends.

*The Ninja Warriors* is a pretty straightforward two player horizontal beat 'em up. It was a well-balanced challenge with some neat touches, but none as neat as those displayed in the conversion. Naturally the game has been compressed to fit on one monitor, but the graphics have been downgraded making it very

pleasing to the eye. Despite the playing area being restricted to a narrow band the ninjas are still some six sprites in size, and they're beautifully animated, to the point where the female's hair bounces up and down when she jumps as if she was in a *Silence* advert. One of the and of level guardians, the tank, has as many as seventeen different animation steps which makes the turret swing beautifully smoothly.

The technical achievements don't stop there. Whilst there are two disks everything loads in as you play until you have to swap (just the once) between levels. Nothing too radical about that until you realise it's loading in the sound for approaching sequences — and it's all sampled.

There's six levels, the largest being seventeen screens wide, which take you through streets, artfields, and interiors in pursuit of the perennial Boes character (who turns out to be a fat little wimp). The ninjas jump, flip, block blows and hack wickedly with knives. One minor problem is that it's too easy to waste the shinken stars. They're limited in supply so it's all too easy to run out when you need them most — and need them you will because the armed soldiers and the hunch backed ground spiders sap your energy rapidly.

It's a pleasure to play another oriental beat 'em up when it's as polished as this. *Ninja Warriors* should be a surprise contender for the top spot this Christmas or there's no Santa Claus.

## QUARTZ

SCREEN  
SCENE

**H**ows this for a strange scenario? You are the pilot of a ship flying through the lattice layers of a crystal under attack from sub-atomic particles. Shooting the particles

once will split them into three smaller particles, shooting these will result in a neutron being created. Collect enough of the various coloured neutrons and you can choose something from a fairly standard set of add-ons for your ship. Initially you have space for three add-ons but this can be expanded by collecting pods. Eventually your presence will be detected and you will be dragged away to do battle with a large enemy in another layer of the crystal.

Basically, Quartz is a shoot-the-aliens, collect-the-weapons and shoot-the-aliens-a-bit-later game, but it does have a couple of twists. The lattice levels, for example, scroll in all directions and are really only for building up a re-

spectable arsenal, the real action takes place elsewhere. One of the extras allows you to start from the level where you died, an excellent idea as the game can get extremely difficult at times.

Graphics are consistently good. It's a little blocky in some cases. Each level (apart from the false levels) has its own set of aliens so there's plenty of variety as well. Some great graphics effects are dotted around for good measure — just watch that explosion!

A groovy tune plays on the title screen and there are plenty of excellent sound effects in the game which tends to be the exception rather than the rule these days.

Initially, Quartz seems impossibly difficult, but as you get used to

the controls and weapons it all becomes much easier, and you soon get to show the aliens who's boss. Each level requires slightly different tactics, and this adds a touch of variety and stops gameplay becoming monotonous.

Quartz is a fairly standard shoot-em-up but excellent presentation, nice graphics and lots of variety make it surprisingly addictive and lasting.

# TWINWORLD

Once upon a time there lived a peaceful and prosperous tribe of people called the Gaspards. For centuries they lived under the wise command of an old family endowed with magic. However, Maidur, an evil druid

came to learn of this and stole the amulet that controlled their power. Maidur was unable to master the power and the amulet exploded and was blown into twenty three pieces which scattered across the country. It is your job to reassemble the amulet and return the country to its former glory.

Basically, *Twinworld* is a platform/maze game. You control an elf-type character and you must jump around shooting enemies and gathering the objects that are left behind. Each level is made up of two worlds (hence *Twinworld*) and the player can switch between them by using wells and doors (some of which require keys). One piece of the amulet can be found on each level and must be taken to the exit door. Every four levels you are con-

fronted with a major enemy that must be defeated before progress can be made.

Graphically, *Twinworld* is nothing special but makes up for that in other areas. All sprites are of a reasonable standard and all of them are nicely animated. The backdrops are also extremely good and plenty of attention has been paid to detail and variety.

Sound is quite limited; a strange tune plays on the title screen and the few in-game effects often verge on the annoying (although there is an option to turn them off).

A lot of time and effort has obviously gone into *Twinworld*; the presentation of the game is excellent, from the use of joystick right through to the perfectly smooth scrolling.

'This is all very well, but how

long will the game last?'. I hear you ask. Well, that's a problem, like many platform games *Twinworld* can soon become very frustrating due to the fact that you have to work through early levels every time. The programmers have tried to overcome this by supplying an option to play any level, but although this is a help it doesn't stop the gameplay becoming a bit stale after a while.

AMIGA

**D**espite the increased power of machines like the Amiga, games like *Weird Dreams* are still in the minority. The promises held out to gamers of interactive movies and virtual realities have, for the most part of a year that finally saw the Amiga take off, failed to materialise. Instead we've seen a steady stream of 8 bit conversions and arcade licences — not all bad, but hardly the stuff to make you lick your lips in anticipation. *Weird Dreams* attempts to redress the balance somewhat.

The concept behind *Weird Dreams* takes gaming away from cod sci fi and sub Tolkien fantasy and steers it back to the human imagination. In this case it is journey into the subconscious mind. A lovesick character, the victim of a broken affair, falls desperately ill — so ill that major surgery is the only answer, but as the anesthetic envelops him on the operating table, with the faces of the surgical team slowly fading,

he dissolves into a nightmare from which there's a good chance he'll never awake.

The ensuing game takes the form of several surreal subsections in which you control the pyjama clad character. To help him escape from the nightmare you have to collect four oibs which are deposited at various stages in the game. You materialise inside a candyfloss machine, which is where your nightmare begins. You need to collect some floss for the next stage of your trip, but if you're not careful you're likely to come to a sticky end on the giant slimer. If you managed to make it out of the vat, you are confronted by a large wisp holding one of the oibs. If you can't get it to put it down you'll have to leg it into the relative safety of the Hall Of Mirrors. From here you can take two roads, through the mirrors Alice style — one which seems to lead to the apparent tranquillity of a country garden, the other to a Dali-esque landscape full of floating fish.

*Weird Dreams* is definitely very different, but somehow its origins

Oh floss, smashed again

Fairground frolics.

**Rainbird**  
**Price: £24.99**

AMIGA

# RD DREAMS

*Blip, blip, Ready Kidare?*

programmer James Hutchby and artist Herman Serrano go further. The dreams just aren't unpleasant enough. If Deli was an influence as they suggest, they've sanitised him by removing the sex, the disease and the decay. It simply isn't disturbing enough.

I don't want to sound as if I hate *Weird Dreams*, because I don't — it's better than most of the stuff I've seen this year, and most of all it's original in its concept if not its execution. Graphically it's one of the prettiest games around too, but... one final gripe here — why the hell did we have to wait nearly six months for the game to be ported over from the ST?

**Mike Pattenden**

tors doesn't carry it through fully. For all the excellent graphics, the bizarre creatures and the superb effects, the subgames offer little more than minor arcade beat 'em ups and one-dimensional puzzles. That's not to say that it's an easy game, because nothing could be further from the truth. *Weird Dreams* is hard, but it's hard for all

the wrong reasons. The game is slow — that's not just the way it loads each minor section from disk, or in the way the screen takes an eternity to update or scroll, but in the control of the character. The idea was to give that effect that nightmares have where things often move slowly, so your feet won't carry you away from danger quickly enough. As part of the gameplay though, it makes it hard to time your move-

ments. Frustration too readily sinks in.

Despite its obvious drudgery to most games, I'd like to have seen

**G**essler is a cruel, ruthless dictator, a man not to be argued with. In his quest for the most original hat stand he has placed his hat on a pole in the middle of the village square and decreed that anyone not respectfully removing their hats to it will get a jolly firm slap on the wrist.

You are William Tell and your son has just been arrested for ignoring Gessler's hat. Your quest takes place in the woods and mountains near Tell's village and in the towers and dungeons of Gessler's castle. You must find and free your son and then find Gessler and deal him the justice he so richly deserves.

The graphics in *Crossbow* are probably just about passable as average. They suffer from poor design to start off with and don't really benefit from the reasonable animation. Enemies, friends and backdrops are very varied — as they would need to be to cover the enormous playing area.

Sound like the graphics, is bearable but I feel that a little more effort could have been made. The only nice thing is a brilliant rendition of the William Tell Overture.

*Crossbow* is presented as an icon-controlled adventure, the mouse being used to enter commands and guide Tell around. You can instruct Tell to fight, bne, eat, drink, walk, shoot and defend himself. Each option leads to one or more further choices before the command is finally executed. For example you have a selection of arrows with which to pin your enemy's brains to the wall.

This system takes ages to get used to and could put the beginner player off very quickly even after practise. Many commands

*Crossbow v broadsword — very late welthinks!*

"If this, as MicroProse maintain is the shape of the Amiga games to come then everybody should buy an Amiga now" - CU

Battling at the heel of Achilles

# MYTH

**M**ythology opens countless doorways for countless game plots. As you can guess

from the title this is one such game. Based closely around Greek, Roman, Egyptian and Norse legends, *Myth* contains everything from the Chimera to King Tut.

The dark god Dameron has succeeded in altering the past, which in turn has forced changes in modern times. No god can be allowed to alter the course of

history, so the forces of good have selected a mortal man to go back in time to undo the evil work.

Clad in trendy battle gear of jeans, sneakers and baseball jacket, you stop off in Hell. Apart from the Skeletons and the cute Harpies (all of whom are out for your blood), you also have to

vanquish a rather irate demon. If you successfully survive that encounter you have to do battle with the Chimera, a nasty fusion of lion, goat, and serpent. These scenes are set against picturesque backgrounds of rock formations and boiling pits.

If you survive that first encounter

you emerge in ancient Greece (still part of the same level). The first nasty here is a Nymph, who beckons you to come closer. She looks quite pretty, until you make a mistake that is, and approach her. Next up is a colossal Achilles (pretty obvious what to do here). After that you enter a temple full of

Up against the Hydra

**System 3**

**£9.99 cass**  
**£14.99 disk**

C64

SCREEN  
SCENE

platforms which are a bugger to negotiate, especially when you realise Medusa's at the end of them. Finally comes the massive Hydra, a huge slaving beastie which, according to legend, regrows its heads when they're cut off (yet another puzzle, here).

That takes you to the end of the first section, not bad when you consider that there are four equally packed levels in total. *Myth* does use multi-load, but the size of each level means you don't seem to notice it much.

In the second section you're placed on a huge Viking longship, while (sampled) thunderclaps ring from the monitor and the only illumination is provided by lightning flashes. Once you've worked out how to get off this boat you're transported to a quiet forest. Later

on you get to rescue a damsel in distress, fight an invincible dragon, and enter Valhalla in true *Erik The Viking* style. Thor mills around hurling the odd thunderbolt your way while you enter the arena to do battle with Odin.

The most striking feature about *Myth* is its graphics. The animation for the small characters is fantastic. The big monsters are fantastically coloured and their movement is impeccable. It's impossible to list all the amazing

**LASTABILITY** 92%

92%

*Deceptively Friendly Hymn*

*Sorry for being a nuisance, Mr Demon!*

visual features, which is just as well, because they'll always surprise you.

Most of the sound effects are sampled, which makes for a game with high standards throughout. Your arcade skills aren't the only things which are tested, the number of puzzles are enough to keep anybody happy for quite a long time.

I don't think I would be exaggerating when I say that *Myth* is one of the best games to appear on the 64. It has just about everything necessary to make it a classic: amazing graphics, amazing sound, and laibastic gameplay make it a gamer's dream.

Things aren't so easy,  
the door's locked!

Yeah, get down

**E**very once in a while a game comes along that keeps me playing hour after hour, night after night until I fall asleep over the computer. Rock 'n' Roll is one such game.

It's down to you to guide it through thirty-two levels of mazes. To complete each level you must solve a variety of puzzles including unlocking colour-coded doors, smash fragile barriers and repair missing platforms. Added to this you must be careful not to fall into a precipice or run out of time. To aid you in your mission money is littered around that can be collected and used to buy extras in the shops (for example, parachutes to save you from dropping off a precipice, and bombs to blow away barriers). Occasionally you may find a horde of eggs; if you crush these in the correct order you warp to a higher level.

The playing area is viewed from above and scrolls perfectly smoothly to keep the ball in the middle of the screen.

Rock 'n' Roll is beautifully presented. An excellent control system means that the player can get

# ROCK 'N' ROLL

straight into the game and start enjoying it right away, and literally hundreds of little touches will keep you hooked.

The graphics are onsp, well defined, varied and colourful if somewhat limited by the nature of the game. Sound is also of an exceptionally high standard, because, although there are only a few spot effects, these are no less than nine fantastic rock 'n' roll tunes.

Rock 'n' Roll is incredibly playable. There are so many features

that add a little extra something that will keep you coming back for more, it's one of those games that you'll still be playing after months just to get that little bit further.

Beg, steal, borrow or even buy a copy, but get it somehow.

Many means ago

**Y**et another in the queue of crimbo arcade conversions, although this time it

appeared that The Edge had bitten off a little more than they could chew. The major feature of the arcade version of *Darius* was its three screens, an obviously impossible feature on the Amiga. Some of the graphics were extremely large and complicated, and the background scrolled at a very high speed. How could they possibly attempt a conversion?

The solution has been to rewrite the game almost completely. It ended up not so much like *Darius* but more like *Xenon II* kicked on its side, which isn't a bad thing.

With its underwater setting, *Darius +* requires you to indiscriminately blast everything in sight. It's not surprising that you don't actually see any fish. You do however find submarines (which look like space craft), missile pods (which look like space craft) and lots more spacey objects.

Every now and then pods odd onto screen. The first few increase your ship's initial rate of fire until it is equipped with a flame gun. With further additions you can obtain other add-ons. These include homing missiles, torpedoes, large pods that float by your ship, and different weapons for them.

At the end-of-the-level things really start to hot up. The guardians are huge. On top of that they

# DARIUS+

*Minot, tried cod for tea!*

need to be shot when they're in special locations and these take time to find. Featuring the best graphics in the game, the guardians also provide the biggest problems. If your ship isn't well equipped you're not going to stand a chance as some nasties

need to be shot in the hairiest of conditions. If you do die, instead of going back to the main level to build your weapons up, you are automatically stuck with the guardian again. Luckily they appear to be easier to kill the further you get into the game.

If I were to judge this game solely on the basis of whether or not it's a successful conversion, I wouldn't rate it highly. As an example of a rewritten game, however, *Darius +* is superb. The graphics are large, well-coloured, and it has competent sound and a total of twenty-eight levels to provide a multitude of varied blasting action. *Darius +* is a must for anyone who appreciates a good shoot 'em up. **Mark Patterson**

# KEEF

## THE THIEF

**E**'s a likely lad is Keef. Dumped on the Temple steps as a nipper. The priestess took him in, then kicked him out. The magicians took him in — they also kicked him out. And now you got to play Keef, the medieval world's answer to Ronnie Kray and the good-for-nothing characters in Electronic Arts' latest RPG. It's up to you to give Keef a

boost, and to bring him fame, fortune and popularity. Start off with just a few gold pieces and you wits about you. Survive the jungle, the wilderness, a few random attacks and head off to the nearby town. This is where the real fun starts.

Depending upon which phrase you choose, you can elicit some very funny replies from the locals. Some of them provide you with interesting snippets of informa-

tion; some sell you handy equipment. On the other hand, you could always steal.

More often than not you'll find yourself being rumbled, or even mugged, so you'll always need to defend yourself.

The screen display changes to show a forty five degree view in front of Keef. Move him around to face his opposition and click on the fire button to battle them. Unfortunately Keef tends not to

fare too well in combat in the early stages of the game. And he often ends flat on his back.

*Keef The Thief* is a typical example of the high quality of Electronic Arts' RPGs. Keef contains lots of scope for exploration, puzzles, stacks of humour, great graphics and just about everything else you could want. With a very easy play method, I can heartily recommend this to any *Bard's Tale* fan, or to just about anybody else who enjoys an amusing RPG. I just hope we don't have to wait too long before we see more from the programmers, who, aptly, are named Naughty Dog Inc.

# DATEL ELECTRONICS

## DATA RECORDER

- Quality Commodore compatible data recorder
  - Pulse control, oscillator, etc.
  - Suitable for 64/128
  - Send now for quick delivery
- ONLY £24.99**

NOW WITH "JIFFY DOS"!

## NEW

**ONLY  
£129.99  
INCLUDING FREE  
OCP  
ART STUDIO!!**

## DIGITAL SOUND SAMPLER

- The new sampler allows you to record any sound digitally into memory & then replay it with astounding effects.
  - Playback forwards/backwards with echo/reverb/ring modulation.
  - New with full sound editing module to produce outstanding effects.
  - Full 8 bit D to A & A/D conversion
  - MSD compatible with suitable interface (i.e. Detail unit for £20.99 see ad).
  - Live effects menu includes real time display of waveforms
  - Line in/line in/line out/feedback control
  - Powerful sequencer with editing features
  - Load/save sample. Up to 8 samples in memory at one time
  - Complete software/hardware package. Tape or Disk (please state).
- ONLY £49.99**

## COM DRUM

- DIGITAL DRUM SYSTEM**
- Now you can turn your digital sound sampler into a digital drum system.
- 8 digital drum sounds in memory at one time
- Complete with 3 drum kits (Real drum sounds - Not synthesized)
- Create superb drum rhythms with real 8 step time
- Full editing. Move drums. Load/Save facilities
- Output to hd or through TV speaker.

**ONLY £9.99**  
STATE TAPE OR DISK

## OCEANIC 118N DISK DRIVE FOR 64/128

The Oceanic 118N is a superb quality Disk Drive specially designed for the Commodore 64/128.

Just look at these features...

- Slimline design - very compact
- External Power Pack on an overhauling problems (unlike some types)
- Ready to go - no more to buy
- Dread drive motor for super quiet operation and extra long life.

- Now probably the best selling replacement Disk Drive for the 64/128
- Comes complete with manuals connecting leads etc.

**FREE COPY OF OCP  
ADVANCED ART STUDIO**  
(WORTH £29.95) WHILE STOCKS LAST

- Full Feature Centronics Printer Interface
  - Connects types 64/128 to a range of full size Centronics Parallel Printers
  - Easy to use supports Commodore Graphics Set
  - Onboard Microprocessor. Chip access no power programmes to load
  - Works with most applications
  - No more to buy!
- ONLY £29.99**

## PARALLEL PRINTER CABLE

- Connects full size printers to the parallel port of your 64/128
- Many programmes and cartridges (Action Replay/Flash Cartridge etc.) will drive print from this port.

**ONLY £12.99 COMPLETE**

## ROBOTEK 64

## MODEL & ROBOT CONTROL MAKE EASY.

- 4 output channels - each with onboard relay
- 4 in put channels - each fully buffered TTL level reading
- Analogous input with full 8 bit conversion
- Voice taped for voice control.
- Software features: test leads/analogue measurement/voice activate/digital readout etc

**ONLY £39.99**  
INCLUDING HARDWARE/SOFTWARE/  
MIC. ETC. (STATE TAPE OR DISK).

## RESET CARTRIDGE

- Unstoppable. reset button.
- NOTE: new port cheaper type reset buttons offered by others are not unstoppable.
- Resets even so called unstoppable programs
- Add pulse from analogue etc.
- Simply plugs in to cartridge port

**ONLY £5.99**

## 3 SLOT MOTHERBOARD

## SAVE WEAR & TEAR ON YOUR EXPANSION PORT

- Will accept three cartridges on it's high grade PCB.
- Switch in/out any slot
- Fully buffered
- Reset button and on board safety fuse.

**ONLY £16.99**

## TOOLKIT IV

THE ULTIMATE DISK TOOLKIT FOR THE 1540/1541

- A single (ready) is an absolute must for the serious disk user. Toolkit IV has more features than most for less
- RISC DOCTOR V2** - Read & write any track & sector including extra & remastered tracks. Repairs damaged sectors
- HEADER/GAP EDITOR** - Doubles & displays ALL header information including off bytes & header gap. Rewrites the sector header & header gap. Remaster sectors. Also edit any sector tail gap
- DISK LOCK** - Best directory. Recover lost files. Display file start/end addresses. Unrecoverable say file program directly from the disk
- in SCREEN or PRINTER including on demand on screen. Edit. Scan.

- FAST FILE COPY** - Restores file copy. Works at up to 8 times normal speed
- FAST DISK COPY** - Copy an entire disk in 2 minutes or less using sector 1641.
- FILE COMPACTOR** - Can compact machine programs by up to 50%. Save disk space
- FORMATTER** - 10 second format on entire disk in format any individual track or half track 0 to 41.
- SECTOR EDIT** - Quickly Red & recreate all need errors including extra & remastered tracks in sectors & half tracks from 0 to 41

**ONLY £9.99**

# DATTEL ELECTRONICS

## UNBEATABLE MIDI PACKAGE!!

SAVE  
**£30**

**KEYBOARD MODULE**  
allows for entry of music from the QWERTY keyboard. Sequencer works like digital recorder.

## DATTEL MIOI 64 INTERFACE PLUS ADVANCED MUSIC SYSTEM

**ONLY £39.99**  
**NO MORE TO BUY - THE  
TOTAL MIDI CONNECTION**

The Advanced Music System is probably the best MIDI/music package ever produced for the 64/12E offering a huge range of musical composition features plus MIDI compatibility. Add the Datatel MIOI 64 Interface and you have the **TOTAL MIDI SOLUTION!!**

**EDITOR MODULE**  
Just like a word processor for music. All the features you would expect MIDI MODULE.  
This is the module which allows the full potential of the Music System and your MIDI keyboard to be achieved. Using the Datatel MIOI 64 Interface and your MIDI instrument (including Yamaha, see below) can be connected to your 64.

probably the most powerful module. Create sounds with full wave form editing, real-time sequencing etc.  
**PRINTER MODULE**  
allows you to print out your music in a range of printers including Commodore and Epson compact files. Printer can be edited and can also include lyrics if required.

## FREE MIDI CABLES

**LINKER MODULE**  
allows large musical compositions to be created from up to 255 lines linked together offering Tempo and Time signature adjustments. **MUCH RANGE OF FEATURES**  
Advanced Music System has literally hundreds of commands and features. We have only outlined the main headings. This is a truly professional package.

## BUT THAT'S NOT ALL...

...WE CAN OFFER THE ABOVE MIDI PACKAGE TOGETHER WITH THE SUPERB YAMAHA SH10 MIOI SYNTHESISER FOR AN UNBEATABLE PRICE!!

Just look at these features...

- The world's first shoulder keyboard.
- With 28 built-in instrument choices.
- Choice of 28 rhythm styles.
- Vibrato, sustain and permanent special effects available.
- 8 built-in variations for professional rhythm changeovers.
- Complete range of 32 keys for great melody play-back.
- Composes your own backing into the short sequencer.

**SYNTHESISER, MIDI 64 INTERFACE AND ADVANCED MUSIC SYSTEM PLUS FREE MIDI CABLES - NO MORE TO BUY!!**

## UNBEATABLE OFFER

**ONLY £99.99**

## VIC 20 RAMPACK

- Simple plug in memory expansion cartridges for your VIC 20.
- Never be short of memory again!
- Two models available: 16K or 32K.
- Both models are suitable for various memory in chips: 1, 2K, 16K, 32K, etc.
- Many VIC programs require extra RAM. This is your answer.

**ONLY £14.99 FOR 16K**

**ONLY £19.99 FOR 32K**

## NOW YOU CAN INCREASE THE MEMORY OF YOUR C16 EASILY

## C16 RAMPACK

- Plug in RAM cartridge gives you up to 16K EXTRA MEMORY!
- That's over 24K free for basic and even an extra 16K for MSX mode!
- Plugs in to memory expansion port - there's just switch on.

**ONLY £14.99**

## EPROM ERASER

- This handy AC/DC Eprom Eraser will erase up to 4 chips quickly and easily.
- Built in timer and safety switch on cover.
- Superbly styled small enough to fit in pocket - even as it works!
- Works from built-in battery (supplied) or from AC/DC adapter (if required).

**ONLY £39.99**

ONLY £39.99

## 256K SUPEROM EXPANDER

- Select instantly from 8 sockets which accept up to 32K EPROM each.
- Program your own EPROMs using your EPROM programmer.
- No need to burn lots of cartridges - just make a selection from the Superom mask.
- Fullly menu driven so power up select any slot under software control.
- Unique EPROM generator feature will take your own programs, heads or m/s or two lines (full support) EPROMs (EPROM burner required).
- Accepts 2764/27128/27256 EPROMs.
- On board cartridge reset.
- On board operating systems - no programs to load.

**ONLY £29.99**

## EPROMMER 64

- A top quality, easy-to-use EPROM programmer for the 64/12E.
- Fullly menu driven software/hardware package makes programming/reading/verifying/copying EPROMs simplicity itself.

- Will program 2716, 2764, 27128 & 27256 chips, 12.5, 21 or 28 volts.
- Will also burn part for maximum compatibility with cartridges/Suprom Based etc.

- Full feature system - all functions covered like device check/verify.
- We believe Eprommer 64 is the most comprehensive, most friendly & best value for every program available for the 64/12E.

- Ideal companion for Suprom Board, Cartridge Development system, our Serial Expander or indeed any EPROM base project.
- Comes complete with instructions plus the cartridge handbook.

**ONLY £39.99**

**COMPLETE**

AMIGA

SCREEN  
SCENE

Weekly lovely fawns, irresistibly cute animals

**W**hile all the recent publicity surrounding the declining African animal kingdom, you'd think the last thing anybody would do is let rampant computer game freaks loose in the bush, with a gun and a camera. It's all very well saying photograph the animals and shoot the poachers, but unfortunately it's all too easy to get trigger happy.

Nevertheless, compassion is called for because it's your job to draw attention to the plight of the wildlife (so the instructions say).

# SAFARI GUNS

by photographing rare animals in their natural environment. The landscape scrolls right to left as you drive down a quiet river bank, disturbing the wildlife. Every now and then an animal dashes on screen, or you'll come across the occasional water buffalo or gnu minding its own business when CRACK, you target, hit the fire button and leave behind a widebeest with half-a-dozen elephant stopper pellets lodged in its brain. You have to be very careful in making sure you select 'camera' when you shoot game!

In the event I soon sorted out

the differences between my camera and gun, and spent many a happy moment at one with nature. That was until a little native jumped from behind a rock, opened a large cavity in my chest and evoned up the score for the widebeast I'd dreamed. That man was a poacher, but in this game most of them are preoccupied with poaching you while the rest drive around in Suzuki jeeps or run about with crocodile skins on their backs.

By the time I'd finished off my twenty-four shot roll of Kodachrome I had devastated hell of

the countryside and collected more lead in my body than an elephant with big teeth. When the shots were finally developed there was more than enough ground to keep a geologist happy for a lifetime. Unfortunately there was a distinct lack of fawns.

Later on in the levels tourists start to mingle with the grass and trees increasing the options for your gun. By level three things start getting pretty hectic, bullets flying in all directions with several bewildered animals caught in the cross fire.

The aim of the game is to draw attention to the green movement, but sadly the intentions are lost in the gameplay. Lacking on education, more of a mixed shoot 'em up, and even without the ecology it's still only an average game.

The road to destruction.

# SNARE

It's been a while since we saw anything new from Thalumus, not including the pretty disappointing Amiga Newkeys, but to all intents and purposes, Snare is really quite good.

The plot is pretty similar to that of *The Running Man*, the Stephen King/Peter Bachman book turned Amiga movie. An eccentric millionaire built *The Snare* as his final resting place. On the day of his death, he travelled to the far side of *The Snare* with the most valuable object he possessed, activating all the traps as he went. And there he lies now, in a tomb of

Don't get bottled in.

danger just waiting to be robbed.

Many men have tried to get to the old man, all of them have failed. Such a public spectacle has *The Snare* become that it is now the play area in a huge TV game show, where fit young men and women can try their hands at getting the treasure that lies at the bottom of the twenty levels. If you win you become fishy stinking rich. Fail and the punishment is death.

Each level is a long vertical strip that you race around on in four directions. Actually you only move in one direction, but the scenery mimics your movement by quickly flicking through ninety degrees. So basically, you always scroll upward toward whichever compass heading you face. As you can probably imagine, this is very disorientating, and every so often, you have to stop for a second and work out just where you are and

what you're doing.

To complete a level you have to find a transportable, normally hidden at the far side of the level. Strategically placed are ones that change your direction, block you, accelerate you toward the nearest wall, and holes that drop you to your death. You must also contend with enemy craft, which you have to find and destroy by use of your radar and your laser cannon. Your ship can also jump short distances to get you over certain holes and you can build walls to redirect the guards.

As you go through the game, the puzzles get harder and the guards get smarter, and so the game provides enough challenge to keep even the most adept arcadesters going.

A fun, original and challenging game that'll keep you busy for a good few hours.

# ALTERED BEAST

Zeus has cast a spell on the cunning clutches of Nell, evil Lord of the Underworld

Risen from the grave, you are presented with supernatural powers beyond this world. Collect the 'mystical' spirit balls and transform into an awesome array of creatures - as Strongman, punch and kick harder than ever before, as WereWolf and WereTiger rip the flesh of the demons of hell and as Bear, knock out your enemies with one bad breath!

You hear the distant cries of the beautiful Athena and as the terrors of the Underworld tighten their grasp, the beast within rises to face... The Beast!

The main artwork depicts the character Retrograde, a heavily armored bounty hunter, in a dynamic pose. He is shown from the waist up, leaning forward with his right arm extended, firing a powerful energy weapon. Bright blue and white light trails emanate from the weapon, creating a sense of high-speed action. The background is dark with streaks of light and some debris, suggesting a chaotic environment. The overall style is reminiscent of classic sci-fi action games.

## Angel phase

● I'm writing to let you know how good I thought CU's 'Becoming The Bionic Angel' feature was in November.

It was an utterly fascinating look at the future of leisure technology. I can't wait to get hold of one of those things, they look mindblowing!

Nowhere else can you expect to find editorial of this quality. CU is more than just the best Amiga mag around.  
P. Walker,  
Leeds

*Thanks for the compliment. Check out this month's cyberpunk feature for further mindblowing.*

## Mail disorder

● This topic may have been discussed in your magazine before now and if so, I apologise for asking it again, but I feel that there is a particular area in the computer software industry that needs some scrutiny or at least needs to be brought to the public's attention.

The topic is mail order computer companies. I have dealt with several mail order companies who frequently advertise. Over a five year period I have been consistently disappointed, annoyed and frustrated at the level of professionalism within this area of the software world. That may be too broad a statement so before I incur the wrath of every mail order company in the country I would like to point out that my experiences have occurred at the cheap/heavy cut price end of the

trade. Naturally, people are lured to the cheapest price and I have to admit that I was no exception but I have found that even though the price has looked low, the final cost has been high in time and money wasted on telephone calls and writing letters not to mention raised blood pressure.

What sort of event am I talking about? A wide variety of things have happened almost without fail. These range from ordering two tapes and receiving one, not receiving anything at all, getting products with something missing, being charged twice on credit card for the same item, the product being smashed beyond belief too badly to be done in the post, getting the item eight months later at the wrong price and just recently, ordering two tapes and after three weeks of not receiving anything, phoning up to find out that 'we are out of stock of those and we will not be getting any more'.

Nothing was mentioned at the time of ordering and nobody subsequently bothered to contact me. Surely this type of treatment is not happening to just one person! What is everybody else experiencing?

After trial and error I have found a Nottingham company that does itself proud and provides a service that is good and reliable. They are a touch more expensive but in my opinion the little extra is well spent.

Rather than treat this as an opportunity to have a gripe and moan, I hope it prompts some mail order companies to respond to this and explain why things are as I have found them. Is it because the profit margin at the heavily cut price end of the trade is insufficient in support service in the form of extra staff and/or a decent stock control system? It seems that it is too much of a financial burden to have anybody available to answer the phone in a lot of cases. I tried to phone one company five or six months to find out where things were. We did not get a reply to a letter either. With that same company we even had to go to the lengths of changing our credit card number due to difficulties.

Whatever the excuse, you can count me out. I have found what I want from a mail order company. At least now I will never again have to

listen to the words 'It must have been lost in the post'.

S. J. Hall,  
Doncaster

*Is any mail order firm out there brave enough to respond to the challenge? Mr Hall's complaint is one of the many we receive (though one of the few printable ones).*

## Overview

● I've owned an Amiga now for over three years. I have seen the standard of software get slowly better during that time and it's only until fairly recently that the major software houses have done any justice to the Amiga's software.

However, we are still seeing ST games ported onto the Amiga with only the addition of a sampled tone, sound effects and £5 on the price tag! (I really dislike STs, I think they are useless. I should know, I own one in addition to my Amiga and C64.)

When I ask to see a demonstration on an Amiga game in a shop (yes, there are a few shops that demonstrate games! If it is an arcade game and has jerky scrolling I tell them to turn it off. Games that fall into a jerky scrolling category include *Aliased Beast*, and *Robocop* (somehow I knew this one was going to be jerky!).

Playability for me doesn't just depend on how the game is constructed, or the number of levels, or how good the graphics are. What matters is that everything moves quickly and smoothly. This of course is not always possible. For example you're never going to get an arcade perfect version of *Pow or Drift* or *Galaxy Force* (though why anyone would convert *Galaxy Force*, I don't know. It has no playability other than the

'Wow, look at those graphics' factor) on the Amiga. You could however get a near arcade perfect version of *Aliased Beast*, providing it was programmed properly!

Another main gripe of mine is the horrendous price of Amiga games. I am and was perfectly willing to pay out £34.95 for *Interceptor*, because it is a simulation and has brilliant playability. I still play it today, a year after I bought it. It is much better than *Falcon*, which has the aerodynamic capabilities of a

brick, but not the responsiveness. I wasted £29.95 on *Falcon*. Lesson 1: try before you buy!

What I won't do is pay £25 for an arcade conversion that only has a couple of weeks playability. What adds insult to injury is that Amiga games are nearly always £5 more expensive than the ST version, when all we are getting is ST standard products. I think the price point for 16 bit Arcade conversions should be £15-£20. At this price there would be less piracy, software houses would sell more copies, and therefore make more money.

The worst offender to date of an excessive price is *Psychonast for Shadow of the Beast*. While this is a good program, with excellent graphics, and decent sound — though it is a bit lacking in gameplay and doesn't recognise an external drive (which is another thing I hate, two disk games with lots of disk swapping that ignore an external drive — arrhhhg!) — its price of £34.95 including a 'free' T-shirt is excessive to say the least!

Look at the packaging as well, a massive cardboard box that will probably get tatty very quickly — nothing the aforementioned 'free' T-shirt (how much would the game cost if the T-shirt wasn't free? I wonder? £44.95?!) a poster and a small booklet. What's wrong with getting rid of the T-shirt, packaging the game in a video style plastic box and taking £15-£20 off the price tag so that more people can afford it? You can't use piracy as an excuse in this case.

Cutting the prices of games won't of course solve the massive piracy problem, but it would reduce it. There are probably a load of people out there who would buy more games if only the price were reasonable.

Anyway, that's enough of my moaning, I'm glad I've got it off my chest! On the plus side it's nice to see that some software companies have released some very decent Amiga products recently. My heartfelt congratulations go to Ocean for their superb *Batman* licence.

Stephen Robertson,  
Crayford, Kent

*Your points are well worth making and we agree with them all — bar one. Falcon is worth the money.*

What's in a name, eh? Keith Campbell is here with news of some good adventures, some of which are lousy, and some adventures which — well — simply aren't adventure games at all.

#### SHERLOCK

Who can tell Daniel Crane, of Sydney, how to get hold of the torch in this game? One problem posed, another solved! Paul Gorden, you are using the wrong password in *Sherlock*, according to Ray Smith of Milton Keynes. You should say PROPRIETOR and SWORDFISH in the golden bar for an introduction to Aldar, to whom you should give the garnet. The password to enter the tower is PARR. Say this and you should be OK.

#### DEJA VU 2

There's a door that Kostas Pollizas of Athens is dead keen to get behind, as he's sure there's a wealth of interesting facts behind it! Trouble is, there's a bunn standing in front of it, demanding a nirkel. "... no matter how many nirkels I give him, this bunn does not allow me to enter ... complains Kostas, who is sure he is very near to the end of the game.

#### LEGEND OF THE SWORD

Yes, it seems someone HAS erred the problem of how to escape after being captured and tied up. Paul Coppins, after proving his prowess at

adventure with a long spell helping me with the C+VG Adventure Helpline, became a play tester for Rainbird. Of course, that means he gets to play adventures in depth, mostly in the firm's time! Without cheating, he discovered how to escape his bonds, although, modest as ever, he admits to stumbling across the solution by an Ident!

"What you must do," says Paul, "is to break a bottle just before being captured. Then later, you can manoeuvre the broken glass with your feet, and cut through the rope."

#### KING'S QUEST 1

Morten Bratthalde and his friend, from Steinkjer in Norway, have done everything that can possibly be done in *King's Quest 1*, short of guessing the name of the gnome. Well, at least, they think they have. But when they return to the King with the three treasures they are unable to give them to him. "He just says: 'Come closer, my voice is so weak! And we can't get any closer!'" says an exasperated Morten. A misleading reply of the type at which Sierra excels, by the sound of it! But here's a tip that might help — BOW to the king!

#### HEROES OF THE LANCE

Mark Coster, from Strathpine in Queensland, is playing *Heroes of the Lance*. He reckons he's done pretty well on the first level, except for dealing with the baby dragons. Now he has got to the stage where he can't find anywhere else to go. Can you help him? If you can help any of the worried adventurers mentioned here, or have problems of your own, drop me a line and let me know. You'll find me at The Valley, CU, Priory Court, 30-32 Farringdon Lane, London EC1R 3AU.

## COMMENT

There was a time when an adventure game was a series of tight puzzles solved with a series of verb-noun inputs. It had no graphics, and very little text, ever, since memory was a scarce resource. So an adventure was cryptic, dramatic, and exciting!

Meanwhile, RPGs were ludicrous affairs, with jerky block-like "monsters" that were all clones with different names, trying to fight their way through the chainmail you bought at the inn in part one of the tape. Yes, *Hellfire Warrior*, which played on a TRS-80 long before the days of the C-64, is well remembered. Thank goodness those days are past!

## INTO THE

Moving on about seven years, with more memory and better graphics than we really know what to do with, the RPG has vastly improved, into a less contrived game form; whilst keen adventurers would probably say that adventures, on the whole, have suffered, with the addition of graphics and a slowing down of the response, and are designed to appeal to the lowest common denominator. During this time we have seen a gradual merging of adventure and RPG, to the extent that it is sometimes difficult to put a label on a game. In particular, *Legend Of The Sword and Beyond Zork* come to mind. I once argued for hours that Mindscape games are really adventures, and still failed to persuade an RPG fanzine.

So what IS an adventure game? I am unsure...

\* I'm finding it a bit confusing as to what constitutes an adventure game. For example, the October issue has a review of *Iron Lord*, which looks like an adventure but isn't reviewed by you. Also, the adventure chart includes *War in Middle Earth* and *Hillsfar*, which I think were similarly handled in CU.

Ian Coveney,  
Chiswick

Campbell's Comment: Adventures and Role Playing Games have always had a great deal in common. My definition of an adventure is one in which there is some text output, with input in the form of text or icon-constructed sentences, which consists of a number of logical puzzles. *Iron Lord* is a bit marginal as either, and with young Dillon around the place, always dead keen to knock up a thousand words or two, I didn't get a look-in. As for the charts, it's my considered opinion that the people who compile them can't tell the difference between an adventure game and a chicken dansak. Now here's a game that fits the adventure definition, more's the pity...

\* I would like you to know that I hate *Chronoquest*. It is utterly unplayable due to dodgy object

controls and a serious bug that doesn't allow you to read any letters or scrolls. The ST version, however, doesn't have those faults, and people are therefore able to play this contemptible game. A warning to others: steer well clear of this very very poor offering by the usually good Paycoarts. Maybe they should stick to arcade games

Karl Bergin,  
Amanor Kilbride,  
Fare.

Campbell's Comment: Seems you are saying the game itself is contemptible, irrespective of the bugs in the Amiga version. It's obviously not worth buying, folks. And just think, you could get five chicken dansaks for the same price!

I often get a request for a complete solution, and I would like to take this opportunity to say The Valley does not dispense them. Write in with a specific problem, and I'll write back to you, usually with enough of a hint to get you through the difficulties you're having.

\* Even if some adventurers ask for complete solutions in the Play To Win Helpline section, I still prefer Valley Rescue. I think complete solutions destroy the excitement of adventure gaming

Oyvind Asebastol,  
Nordfjordelid,  
Norway.

Campbell's Comment: Exactly! And what makes adventures so exciting? Could it be the thrill of discovering what you get to do at the end...?

\* According to the people at Magnetic Scrolls, it seems that there is only one possible ending to *Jinxter*, since you were placed from in front of the bus for the sole purpose of retrieving the bracelet and charms. This merely puts you back where you started from.

It seems to me they could have given you more than a cheese sandwich.

Julian Smith,  
Sheffield.

Campbell's Comment: But had they given you a chicken dansak, Magnetic Scrolls would have exceeded their budget for the game. And would you have been prepared to pay an extra fiver to cover the cost?

If you have something bold and outspoken to say about adventure games, this is the place to air your views! Write to Campbell's Comment — but be warned — I can give as good as I get! Let's be hearing from you, then!

## ADVENTURE CLUES

### FAERYTALE ADVENTURE:

- The golden statues will be found:  
1 — At the Crystal Palace on the Isle of Sorcery.  
2 — On the battlefield at Grimwood Forest.  
3 — In a castle SE of Marholm.  
4 — After you rescue the princess.  
5 — In Hrmsath's tomb.

### MANIAC MANSION:

Give the man eating plant a glass of pool water

### SCAPEGOAT:

Start learning with thisledown, make

the vandals think the staff are around and the ghost on the landing is frightened by the same things as you!

### EUREKA ROMAN:

Great Nero in Latin! For a cure for leprosy, give the red robe to St Peter.

### VALKYRIE 17:

Move the dustbins to get into the castle.

### DRACULA:

Don't know your own name? You signed the hotel register, didn't you?

# INDIANA JONES AND THE LAST CRUSADE

Indiana Jones' father has been kidnapped by Nazis, who need him to find the Holy Grail and so to ensure the perpetuity of the Third Reich. Indy sets off in pursuit, frees his dad, and via Venice, Austria, the Middle East and an encounter in Berlin with Adolph himself, finally find the Grail. Then he finds out that he still hasn't finished! There are three ways in which this adventure can end.

You'll find plenty of action, animation, sound and music in this game, which is based closely on the film, and in-

deed, presented in film-like style. But make no mistake — this is a real adventure, not an arcade adventure, nor is it anything like in the style of *Labyrinth*. Don't let any other magazine persuade you otherwise. In fact, no arcade skills are required, which makes it

more "pure" than most Sierra adventures.

Lucasfilm have come up with an original animated graphics format, which although it will inevitably be compared with Sierra's, is totally different to play. Each location is depicted graphically.

**US Gold/  
Lucasfilm  
Amiga  
Price: £24.99**

*Way down in the  
bowels of the  
catacombs.*

## INTO THE

# VAL

*You have to find dad, before you find The Holy Grail.*

*If you don't take action the sign of the Swastika will go on forever*

ly, but is not necessarily confined to the area shown on the screen at any one time. Moving the character to the edge of the picture may cause it to "pan" smoothly across the landscape or room.

Enter commands by clicking on combinations of word icons and objects in the picture. WALK TO is the default command, and it is redisplayed after any other command is entered, so that the character is always ready to move to any position in the picture pointed to and clicked on.

Part of the action takes place in catacombs and castle corridors, and here the control is slightly different. Only the small area of such a labyrinth

in the immediate vicinity of Indy is illuminated, and here he is moved by "beckoning" him with the cursor.

The action is cleverly linked with "cut away" shots, where the computer takes over. Sometimes these show what is happening elsewhere, and sometimes Indy is taken automatically into the next episode of the game.

On the whole the puzzles are quite cunning. Some involve referring to the Grail Diary, which displays a page appropriate to your current situation. It's essential that Indy does not embark upon his travels without it!

Other puzzles are a matter of logic. Saving the game at

regular intervals will be very helpful, as you will often need to backtrack so as to do everything in sequence.

On three disks, the package includes Indy's diary and a

fairly foolproof non-photocopyable anti-pirate device. So you'd better get Indy for yourself — you'll find it an intriguing adventure that's a pleasure to play.

# HELP LINE

Thanks, as avar, to everyone who sent in a letter.

If you want to get hold of a particular solution, poka, hint, tip or listing then send it in to the Helpline and we'll print your enquiry. A selection of replies will be published each month — and the rest we will send on to you.

And, if there's a particular problem with which you think you can help, send your reply to Responses at the same address below.

## ENQUIRIES

### RUN THE GAUNTLET

I have an Amiga 500 and I am having a spot of bother with the game *Run the Gauntlet*. I never seem to be able to beat both computer opponents on any of the events and some tips or pokes would come in very handy.

Simon Bradwell,  
Buxton K3.

### IKARI WARRIORS

I bought *Ikari Warriors* a couple of weeks back. When I reach the tanks I always seem to get shot and always lose lives. Please could someone help me before I crack up. A cheat for infinite lives would do nicely.

Stephen Holmes,  
Liverpool K1.

### WIZBALL

I have a C64 and could somebody possibly give me a poke, cheat etc. for *Wizball*. I'm having terrible problems.

Roger McNally,  
Manningtree K2.

### PREDATOR

I own a C-64 and I have a little problem with *Predator*. At the end of the game you have to fight against the E.T. but I don't know how to kill him. So if there is anybody able to help me please write.

Robert Ridolfo, K4.

### NEURDMANCER

I have a problem with *Neurdmancer*. After buying the 64 version I've been trying

for weeks to get on in Cyberspace. That's why I've decided to write to you. Here is my problem: I've got stuck in there. How can I destroy a base? Does a program exist to do so? Where do you get them? Please help me — You are my very last chance to solve this game...

Andreas Buschsewke,  
F.R.G. K5.

## RESPONSES

### DRAGON NINJA (H2)

This answers the request: how to beat the end of the level guardians. I have also included tips on how to defeat the normal enemies.

*Blue nuna*: any kick or punch will do.

*Red ninja*: any kick or punch will do, but if he gets past you he will turn round and try to get you again.

*Grey ninja*: you can kill him with any punch or kick but watch out as he throws shunken. If he throws them at head height then you can kick or duck. If the shunkens land on the floor then you can do a leg sweep.

*Samurai*: he will approach you and jump up. Walk in the direction he came from and turn around. As he lands punch or kick him.

*Dog*: do a leg sweep or kill them with a set of nunchucks or a knife.

*End of level 1 boss*: any kick or punch will do and the flaming fist is especially good. Also the nunchucks is brilliant. You can hit him without him even touching you. If he stops and breathes in then, walk away as he will let up with a breath of flame.

*End of level 2 boss*: wait at the end of the truck for the clown man and use fire. Then as he jumps up next to you let up with the flaming fist. As you hit him charge up again and fire. Do this twice and go to the front of the truck then flame him again. With this method you should lose a maximum of two units of energy.

*End of level 3 boss*: hit the replicants once each, then hit the original 4 times with any kick or punch but do not use the flaming fist. On the 5th hit you can make use of fire. Every time you do this you make him kneel and can only hit him 5 times. So this method allows you to take both originals and replicants.

*End of level 4 boss*: make sure you have nunchucks and keep hitting him until he goes off the screen on the right hand side; then continue hitting him and he will not touch you. If you are in 2-player mode all you have to do is to get him in the same place and keep hitting him with a flaming fist.

*End of level 5 boss*: it is advisable to have a pair of nunchucks now as it becomes a lot easier to use them. First jump off the train and wait. The boss will jump down, so get behind him and whack him.

Then jump up onto the train and down again as he jumps as he jumps up. He will then jump down, so hit him again. Repeat this, soon he will die and you will be unscathed.

*End of level 6 boss*: run into him and fire ball him. Repeat this a few times. When he passes you, turn round and fireball him again. You'll lose half to one life.

*End of level 7 boss*: no real techniques as the whole level consists of the other bosses. So just try to incorporate all the above tips.

*Dragon*: this guy is tough! If you remain on the ground then he'll drop fireballs on top of you, so what you do is to jump onto the helicopter and flame him. Don't jump up and do flying kicks or you'll hit the captor's blades. You'll need at least 2 lives as he is tough.

After that you can go and eat with the president and watch the sun go down.  
Hao Yin Tsang

### THUNDERBIRDS (J9)

Gordon needs the Aqualung and American Express card.

Alan needs the Aqualung and Radiation pills.

Take Alan left and up from Thunderbird 4 and use the pills when you see the captain. He gives you a blue card. Get Gordon to find the pills which are found by going left, down and right. Use the pills. Keep going right until you can go down. Go down and carry on right until you come to two computers with B and V on them. Guide Alan there and put both characters in front of the B computer. Then use the American Express card to shut off the reactor and then resurface the sub by using Alan and Gordon to bail out the water out.

## RAMBO II (H9)

When you are back in the camp again, walk to the bottom left. There is a black shed. Throw knives at it from the bottom and the POW's will be released. Now go back to your heli (end of stage two).

For stage three there is a cheat: have another joystick in port one and pull it back while pushing the other one forward which makes your chopper fly faster. Don't let go of the joystick!

Erik Veldman,  
Netherlands.

## JACK THE NIPPER (H12)

In response to the enquiry about Jack The Nipper II I have some tips.  
General  
Ultimate naughtiness is your goal.

Coconuts and blowpipes are useful, but dynamite is not  
To get the parachute  
waggle the joystick up and down and press fire while falling.  
Practice this.  
To be very naughty,

fire your blowpipe at the beehive to make the bees escape

Throw the jar of grease at Tarzan and throw the mouse at the elephant

Fire your weapon at the native who stands by the crocodile pool. He will walk towards you. Jump on the rope and swing until he falls into the pool.

Jonathan Campbell,  
Northern Ireland.

## SAMURAI WARRIOR (H8)

This is a poke for infinite energy, Ryga and Karina.  
1 print chr\$(147), for I=304 to 431:read a\$

## How to use the Helpline

It's easy. Just send in your letter, marking your envelope with the appropriate code number if you are sending a response. Post your letters to Play to Win Helpline, CU, Pnory Court, 30-32 Farringdon Lane, London EC1R 3AU. Oh, and if you're making an enquiry, just write a couple of lines explaining the particular problem, ie why you need a poke, why you would like a particular listing.

The sender of each response published will get a free piece of software. This month's winners will receive a free game. (Please specify Amiga, 64 tape/disk).

Next month will see another goodie up for grabs. Sorry, but we're unable to respond to individual requests for games.

If you are replying to any of these enquiries don't forget to mark your letter with the reference code for the person you are responding to. If you send in more than one enquiry, please put each on a separate sheet of paper. Likewise, if you send in a response but have an enquiry too. That way we can file everything in neat alphabetical files.

### HOW TO POKE (AMIGA)

This is a more detailed description (for those people who have only recently got an Amiga computer) about how to enter the cheats for games which are printed in this magazine.

#### STEP 1

Switch on your Amiga and wait for the Work Bench hand to be displayed.

If you have an Amiga 1000 then insert your Kickstart disk first as described in your manual to get to the above stage.

#### STEP 2

Get out your Workbench disk and insert it into drive 0. After a while this will finish loading and you will be presented with some icons and a pointer which is controlled by the mouse. Eject your Workbench disk and insert your EXTRAS (for something similar) under it. Grab your mouse and position the pointer over the icon and double click the left button. If that worked correctly then you will see a window with more icons appearing in it. Now double click on the icon which says AmigaBASIC under it.

#### STEP 3

You are now in AmigaBASIC and you are ready to type in the cheat program which you like. The program must be typed in to the right hand

window. To move between the windows just position your mouse in the window that you want and press the left button once.

#### STEP 4

Now that you have finished typing in the program in the right window you need to save it. To do this move the pointer to left window and click left button once and type, SAVE "filename"

Where filename is the name you want the cheat to be called on the disk. Now before you press return eject the extras disk and insert the formatted disk which you ore to save the cheat on then press return. During the save the computer might ask to have certain other disks to be inserted so just follow the on screen prompts.

#### STEP 5

Finally to run the program, in the left window type, RUN (followed by pressing the return key).

The cheat should now work. If you get any error messages it probably means that you have made a slight error when you entered the program. Just check through the program and if you find a mistake don't forget to re-save the program again as described above.

David Slack

# PLAY TO WIN

If you're thinking of submitting material to Play To Win try to follow these guidelines.

1. All pokes need to be clearly written and accompanied with instructions (preferably for new games);
2. Tips need to be concise and to the point;
3. Maps need not feature complicated artwork as long as they are clear and self explanatory

There will be a software prize for anything printed.

Send all submissions to:

Play To Win, Commodore User, 34 Abbots Court, Farrington Lane, London, EC1R 3AU

# PLAY TO WIN

Shadow Of The Beast has provided more than a few stumbling blocks for the unwary. With a map and pointers is Adrian Ludlow

The first important rule is to take your time. A lot of the larger monsters require exact timing to overcome and need to be hit in the right location. The smaller nasties require you to stand off and wait for them to come within hitting distance.

Try to follow the map as closely as possible and plan your route. It is always wise to leave a few spare energy pods behind you so you can double back before you enter the next level.

Use the pause key to work out your next move. For monsters which follow a set pattern wait until they have finished their move before working your way through them.

On the whole, be prepared for what's coming next. Time all your movements and don't be afraid to back away.

If, even with the map, you find life difficult, try this little infinite lives cheat from Robert Dean (though we would advise playing the game without it first). Plug both a mouse and joystick into their respective ports. Wait for the last of the introduction screens to appear then press and hold both the joystick and the mouse buttons, until you change disks.

# STAR COMMAND

## SETTING UP

The first task is to put a party together. Select personnel with minimum attributes of fifty, although this is not essential for an Esper. You need two good pilots, so give them both high ratings. The officer needs good combat, breaking skills, and the main pilot needs a high ship repair rating. Machines used to be skilled in heavy armaments and scouting. Send them to survival school and on special forces training in the initial period. Make sure the soldiers are familiar with chemical, explosive, heavy and light weapons.

The Espers assemble the Hell Knights of Star Wars fame. Apart from having ESP they also have exclusive use of Light Swords. Initially the Espers should be given a three-point Esper rating, a one-point light weapon rating, one-point on-hand weapons and the rest given to medical training.

Next you need a ship. Go for a Hornet as this is almost identical to the Wasp, which costs substantially more. Buy Hyper Velocity Rockets for all six positions plus two rounds of ammunition. For protection you need four Anti-Inertial screens and three-hundred points of armour.

Personal equipment should be restricted to those that cost less than six units. You need more money for the Esper, on the other hand, you can sell the rest of the equipment with the ship. The ship has a few special skills, such as a Supernova flame gun or you can afford it, a 40mm Panzajaeger Rocket Launcher. Give two of the soldiers Cosmic Mist Bombs and Neutron Grenades along with their Ion Guns. Each character should have Antibiotic and Plastic Armour. As a rule of thumb, always go for the lightest armour with the most protection.

Now you're ready to take on a mission. The first task is to track down the pirate Black Beard and destroy the overraft. In order to do this you are given a series of small missions. The espionage mission is the fourth, and the one that usually comes up first. You are required to fly to Sectors 23-29 and investigate all of the planets there. On low technology worlds it is impossible to carry out so espionage mission; the best you'll manage is a scientific investigation. More than anything you'll be able to load your cargo holds with valuable goods. On the other

hand, if you do get to a high-tech planet you run the very high risk of being taken by the local pirate community. If there's a large number of them run away. However, if you win a victory can be a combination of the Ion Guns and Maelstrom weapons to kill as many pirates as possible. If some of the opposition are equipped with flame throwers or rocket launchers target the Ion Guns at them using an Esper Mind Blast.

When you've collected enough equipment fly back to a space station and you'll be given a reward for all captured flame, plus crew wages. Rather than invest money in new guns and shields for the ship, increase your armour up a few thousand points. Spend the rest on Ion Guns, grenades and sighting equipment for your crew. It's wise to buy a repair kit and some medical kits for the Esper.

By this time you should be slightly clued up on how the game system runs and have enough equipment to keep your crew in one piece.

## SHIP COMBAT

If you're attacked by more than one ship, your best bet is to position your craft

central to the others. This gives you the advantage of bringing more guns to bear on the other ships. When the communications phase comes round try impersonating a deity and asking for a tribute; you'll be surprised how many times it works. The easiest ships to defeat are freighters; these only take a few hits. If you come across a private ship you'll be better off arranging a truce as you get no money for destroying these. But inevitably you'll be attacked by ships far larger than your own. Your rockets won't be able to penetrate their shields and you can't out run them, so dock and do battle. If you should win, steal money from the victims, bounty from the ship and salvage money by towing it back to a space station.

## INDOORS

Whenever you enter a base you'll need to take a radiation detector, a motion detector, a lock pick set and a chemical fork. You should search everything, and more importantly interact with all the people you meet. They often give clues vital to your mission.

Remember to save the game at every possible opportunity, and never be afraid to run away.

# PLAY TO WIN

SSI's *Star Command* has all of the detail of a heavy-weight Sci FI novel. Well it deserves its superstar . . .

"And it's got squillions of weapons too," yelled Mark Patterson, as he leafed through the game in search of these hints.

# SIM CITY

On seeing the crumbling estates, out-dated roads and rusty bridges of your city, how many times have you said "Put me in charge for a day and I'll make this wheezed thing work?" Now with Sim City, take the destiny of the world's greatest cities in hand to take charge of a new evolving and growing city. Become both mayor and city planner of a dynamic real-time simulation.

Build houses, streets, factories, airports, a stadium, or even nuclear power plants. Organize urban transport, hire police, firemen, bulldoze entire neighborhoods.

Raise and collect taxes, balance your budget, manipulate property values. Sim City is alive. It's loaded with animation and detailed sound effects. Build roads, cars appear, kayakers, buses go. Build an airport, planes fly. Neighborhoods go upper-class. Areas deteriorate into slums. Several nations have given you huge fortunes. Everything is managed and controlled in real

## SIM CITY

**What you should know about the game of the year.**

time. Every decision instantly influences the life of your town. In a special mode, you can even cause tsunamides, floods, fires and other disasters at your whim. Save San Francisco from the great earthquake of 1906. Or save Tokyo of pollution and learn its famous 8-movie monster. Sim City is an all-absorbing unique game which contains 8 pre-defined scenarios in 8 San Francisco, Tokyo, Rio de Janeiro. With it's exceptional depth of play, it's still simple to play with ease and graphics without text commands.

Design and build the city of your dreams. Sim City gives you the keys. The test is up to you.

INFOGOLD Volume 8 Issue 20 "People playing Sim City are completely plugged into the world they create, disappearing for hours"  
NEW YORK TIMES "The model is very sophisticated, yet unobtrusively subtle. And just as important, it's fun, too."

INFOGRAMMES

# digital ps

**'Let's just declare the arrival of the 21st Century and have done with it — after all we're already living in it.'**  
William Gibson.

**T**he decade may be over, but this is no time for indulging in nostalgia. Whilst the TV and radio prepare to regurgitate a sanitised version of the decade for our entertainment

over Christmas, we're going to take a look in the opposite direction, no, not the 21st century for as the man says, we're already living there, but at what is already happening — only through the eyes of cyberpunk.

Cyberpunk is a catchphrase which has blasted its way into existence over the past three years, the direct product of William Gibson's first novel, *Neuromancer*, the most influential and most prescient

SF novel of the decade. It's the story of Case, a cyberhacker who jacks his mind directly into a vast computer network called The Matrix where he is employed to cut through the defensive 'ice' of megaprograms. *Neuromancer* is set in an uncannily real near future world of *The Sprawl* — a new Tokyo which has all the detail of a set from *Bladerunner* but which exists on a far more extreme scale.

Gibson set the style, but Cyberpunk, the 'neon sign under which a small group of new SF writers reluctantly write is much more than that. It takes the insular fantasy world of SF and turns it on its own head using it as a metaphor for the world we live in now.

'I'm not really interested in trying to predict the future', says Gibson from the end of a very low-tech phone link connecting me to his Vancouver home. When I

# psychosis

## Cyberpunk's Future Shock

CANADA

...the fiction has been gutted and  
to create cyberpunk. Mark  
videocams through Gibson's  
tricks mindfuses with the  
nature and discovers a future on  
collision course full of Quarks,  
Methamorphers and disorder...

wrote about the Matrix. I was trying to create a metaphor for the virtual world social to exist in the future. I'm in front of the TV and I'm watching a world machine. It's not just occasionally something, something strange or unreal will give me a jolt and I'll see it for what it actually is, rather than just using it.

The world in his novels may have a SF surface, but it's just a device for Gibson to examine something much

more than simple technology. The phenomena of the future is the effect of the future on our world. It's not just a matter of what's going to happen in 10/20/100 years. It's about the way we manage to invent something that

became reality. *Cyberpunk* (see the last page of *Q*) is a complete run-down on these computer headsets which generate a 3-D computer world you can move around in

and interact with. I had no idea at all that scientists were working on this, but I assume have accidentally done an Isaac Asimov. The only difference seems to be that cyberspace looks like being a lot wetter than the Matrix I created. I think basically, virtual reality is going to be like injecting TV advertising directly into your brain.

The Matrix is just one of wildly inventive creations that litter Gibson's *Cyberspace*

novels. *Neuromancer*, *Count Zero* and the recent and definitely the last *Cyberspace* novel, *Mona Lisa Overdrive*. Also well worth searching out is his collection of short stories, *Burning Chrome*, which features a story, *Doplight*, based around what could be the ultimate videogame, a 3-D hologram generator which plugs into the back of your head allowing you to control with your mind a squadron of WWI bi-planes.

The Seven Gates of

# Jambala

ATARI ST

AMIGA

## THE SEVEN GATES OF JAMBALA

Escape from the caves of Jambala in this fun-filled jump and run game with stunning graphics and sound.

You will face a labyrinth of caves which not surprisingly hide a host of inhabitants, good and bad, treasures, puzzles, magic spells and many hidden screens.

If you are lucky enough to find all 7 pieces of the missing magic wand and reach the last city you will finally have the chance to escape from the labyrinth.

A fascinating voyage of discovery through an unknown world of fantasy.

and then, in this case over a pool table in the back room of a club, the two men of similar opposition nature beats playing a game of Type clocks.

Doggett and I have made that have opened up the doors of SF to even more outlandish creations in future worlds created by cyberauthors like Bruce Sterling, Rudy Rucker, and John Shirley. Worlds inspired by what's happening in genetic banks, the processing centres of megacomputers and frontal lobes of hackers and crackers.

The result uses strains of what is real in collision with the cyber-real; gene-splicing, cloning, artificial intelligence, boundaries that are imploding with the advances in biological chips and enzyme processors. Most of the things in cyberpunk fiction are real right

now, they just turn up in twisted, mutated forms. Housing estates may be Babylonian Ziggurats and gangs like the Tokyo Gang and the Los Angeles Angels (Richard Krome).

*Metropolis* get may fight each other with Lavender CS gas and Stun grenades shaped like roses, but they still manage to make it all feel familiar.

"SF is a style" and that's the medium we exploit and one that I personally like very much, but I often get the feeling that the average SF buff wouldn't ever pick up one of our books if they knew about half the subversive stuff in them. As my good friend Bruce Sterling puts it, we're coming in under the radar."

Gibson's next novel, will be set far away from the noise of *The Sprawl*. "For the last two

years I've been working on a novel with Bruce Sterling that's set in Victorian London. Only this is a Victorian London where Lord Byron has become Prime Minister and employed Brunel to develop a steam-powered computer. The whole thing gives Britain a cybernetic jolt which blasts it right through the Industrial Age. What I wanted to get at this book is the real role of technology.

Gibson is a novelist, not a screenwriter. But he has been working on a number of screenplays for some time. His work on *The Matrix* was much publicized and seems to have been a wayside and a two alternative plot for the movie. The movie has already been in the motion picture screen will be

directed by Kathryn Bigelow — who was responsible for the critically acclaimed *Near Dark*. *Burning Chrome*, a Gibson short story has also been adapted for the screen.

But what will the future really be like? It takes some cajoling to get Gibson to talk about it. "Firstly, I think it's really important that we come to terms with and understand technology. I don't think there's any aspect of reality that hasn't been touched by it. Secondly, I think it's really important that we're already doing to ourselves. All politics are now about technology. This next decade will be the Green 90's. What will be nice is if we just got it right. The only thing that seems too keen on reflecting is its past."

## RUDY RÜCKER

While William Gibson is pushing the limits of Cyberpunk, Rudy Rucker, the author of *Spaceman Pro*, is moving off in another direction, pushing the limits of science fiction. In his stories, Rucker imagines a world where the laws of physics are not what they seem. In a hundred miles an hour, not ten, and the time it takes for the novel drops out of your hand, it's not the novel that drops out of your hand, it's the novel that drops out of your hand. Rudy, who happens to be Dr. Rudolf van Bittor, professor of Mathematics and Computer Science, will discuss his latest work, a theory called CA (Causal Analysis).

It's a theory of the universe which is based on the idea of a random walk. The universe is a random walk, and the universe is a random walk.

Bye-bye, bodies and robots in human form.

equal to a useless deadlock with trying each other, but, as in a coin

lock, but a large number of patterns evolve and then fade into infinity of complex shapes — and who knows, your PC just come to life.

## METROPHAGE by Richard Kadrey (Gollancz £3.50)

Metrophage is the wildest mix up of post-culture, cyberpunk and hard-boiled convention which has yet been tried. Filled with energy, it seems to keep the average SF author in work for a lifetime, the story is compressed into a grotesque and high resolution future LA which is the cause of Gibson's rage. The central character is a 100% parent vector whose DNA was sucked on the sun from his former employees. The Comptees who run the city on behalf of the rich patrons who have deserted the decaying Metropolis in favour of his developed environment of New Hope. In his bid to escape he runs across a sewer society which runs a parallel city to the only slightly more sophisticated one above ground. On his way he meets up with gangs like the Zombie Analytics who have pixel strips surgically inserted into the subcutaneous layers of their skin to generate a constantly changing stream of animated tattoos and the Funky Gurus who make killing an elaborate art form in which aesthetic protocol always comes before raw destruction.

## ISLANDS IN THE NET and SCHISMATRIX by Bruce Sterling (Legend £4.50/ Penguin £2.99)

Bruce Sterling is a more refined artist of the word than either Kadrey or Gibson. His two books both have a similar theme: the disintegration of the world into tiny pockets only connected by the massive networks of the future. *Islands In The Net* is a slow building masterpiece which unravels the story of the world's pirates and banks which run small countries and store up all the data that more respectable countries routinely dispose of. Information is a currency more valuable than gold and the pirates run a high tech underworld with pretensions

to respectability. The central characters, themselves work for one of the New Age Ultra-corporations. *Schismatrix* whose ideology makes the modern day Japanese look relaxed and easy going. The plot is dotted with cyberpunk trademarks of wild invention and computer obsession, but Sterling draws it all out carefully to make one really enjoy the ride.

Both novels are considerably more off the wall, but even more fun. Nations have disintegrated so far in this book that tiny pirate spaceships can claim national sovereignty, and as we all know nations can't actually commit crimes.

Sterling breaks down institutions and technologies to their core components with utter savagery, nothing remains untwisted — as Gibson puts it: "Schismatrix is the most visionary SF novel of the last 20 years. Humanity evolves, mutates through different forms very quickly, using genetic engineering and biotechnology. People will be ripped off for the next thirty years."

## THE MOVEMENT OF MOUNTAINS by Michael Blumlein (New English Library, £2.99)

At first this doesn't seem to be very cyberpunk at all but it plays around with a central cyber-theme of genetic mutation very effectively indeed. A sub-race of humans called Domers have been cloned in gene-vats to mine a special fungus in the caves of an ice-cold planet. Doctor

Jules Ebert is cajoled, despite his inherent disgust at the huge, flabby mutated forms the Domers, to go out and tend to them. Instead of healing them, he is instructed only to repair them so work. Unfortunately for him the Domers become infected with a virus he brings from Earth which awakens them intellectually and Ebert has the job of "curing" them, back into their stupidity. This is one of the best novels to deal with subject of genetics.

## THE FALLING WOMAN by Pat Murphy (Headline £2.95)

Again, *The Falling Woman* doesn't obviously fit into the cyberpunk genre, but it's right on the spot nonetheless. Elizabeth Butler is an archaeologist who can see ghosts — the lingering remains of the people who once lived in the ruins she's excavating. She forms a friendship with a long dead priestess and the novel develops into an exploration of Mayan magic and modern science. Mining the twilight zone between technology and myth its greatest strength is that it doesn't read like cyberpunk or SF at all, the "neon sign" has been extinguished completely, but it digs deep at the themes which really make books like *Neuromatrix* interesting. Start with *Wetware* and *Neuromancer*, but if you like them make your way through to this sharp and lucid novel and if you can do without the verbal pyrotechnics and big guns, you might well find this just as good anyway.

# ARCADE

# STUN

**S**tun Runner comes housed in a large sit-upon cabinet (or perhaps "sit-upon" is a more accurate description of this space-age motorbike-atyls console), which usually suggests that you're going to have to part with at least a quid to try it out. Surprise, surprise, it's only 50p. And yet more surprise, assuming you're not totally crap you should get considerably more mileage out of your ten shillings than the statutory twenty-seconds-sorry-you-failed-to-

# AIDIES

quality. But most surprising of all, this isn't just another pretty coin-op, air-hydraulics-and-no-gameplay white elephant — *Stun Runner* really is quite a blast.

Your cosmic Harley-Davidson is set a series of courses to complete. Initially these are mere speed tests, but they soon turn into obstacle courses, skidslides and out-and-out battles.

The courses themselves vary, and there are plenty of tunnels to be negotiated, these provide much of the game's appeal. You can't just coast through the middle of the tunnel — you have to become adept at guiding your bike up onto the curved walls, and even the ceiling. In order to dodge enemy craft or pick up useful or essential items. This is not an easy skill to master. The major factor to get used to is the effect of the highly realistic momentum feature. If you're anything like me in terms of

coordination, you'll spend much of your initial forays in the tunnels careering around the place like a piece of wet soap in a basin of oil. Given that, in particular, picking up items requires a high degree of accuracy, *Stun Runner* will certainly test you.

The items you may wish to pick up include "boost pads" and stars. The boost pads, as their name suggests, speed you up, which will enable you to finish the courses within the reasonably tight time limits. With a few of these under your belt you will literally rocket along. The stars go towards a special weapon known as a "shock-wave", which effectively end spectacularly smashes the opposition. But you'll have to get an increasingly high number of stars to gain even one of these highly desirable weapons as the game progresses.

Then there are the enemies. These come from above as well as all around you, and take

several forms. Some are out-and-out fighters, others are vehicles which invite you to collide with them on your frenetic path through the game. Some cannot be destroyed, and have to be avoided. To deal with these foes, you're provided with a cleverly controlled cannon, allowing you to strafe the floor, wall and ceiling (or sky) independent of your craft's course — a handy weapon.

And finally there are the courses themselves. As well as the store-mentioned standard tunnels, there are plenty of open roadways which undulate and twist just like their underground counterparts, and additionally feature ramps and perimeter walls. On later levels some of the tunnels have sneaky gaps so that just when you've mastered the looping controls you find yourself flying out into a black hole. You are continually confronted with Y-junctions with a minimum of make-your-mind-up time. In

fact, you'd generally give up to conclude that even with the benefit of centuries of hindsight, the intergalactic borough council haven't learned how to maintain the roads safely yet.

*Stun Runner* really is good value for your blasting bucks. Despite its visual similarity to *Hard Drivin'* it manages to combine racing, blasting and control skills in a graphically and hydraulically appealing package. But even more stimulating, it never lets you get complacent — as soon as you think you've mastered the game it throws in a new spanner to fold up your works. A hit, without a doubt, and deservedly so.

### CREDIT FACILITIES

Gordon Harwood Computers are licensed trade brokers and facilitate to pay using our Budget Account Scheme are offered on most items. APR 35.2% 12-36 Month credit sales terms are available to most adults, simply phone or write and we will send written details along with an application form. (RR Applications are required in advance)

**Credit terms with or without a deposit, may be tailored to suit your needs.**

### ORDERING MADE EASY - COMPARE OUR SERVICE

- ORDER BY PHONE:** Please call 0404 Order Centre using our Price, Ask or Payment Charge Cards quoting number & supply date ORDER BY PHONE. Make cheques/bank orders payable to Gordon Harwood Computers (GHCPT).
- DEL:** Personal or business cheques require 7 days clearance from date of receipt before goods can be despatched.
- PREP AT YOUR RISK:** You will pay by Credit Card or order by bank cheque or debit.
- FREE POSTAL DELIVERY:** Cash in UK (Mainland) 7 day delivery OR COURIER'S HOTEL. Add £3 you require time for our working day delivery. UK Mainland. Courier's normally despatched on day of receipt.

After you've purchased from Harwoods we'll still be here to completely satisfy you should any problems arise.

**J.C. WILLIAMS WARRANTY:** If goods prove to be faulty within 30 days of purchase they will be replaced with a FREE UNIT! For the remainder of the guarantee period, all warranty requests will be made FREE OF CHARGE! **REJECTION FACILITY:** Any faulty computer or monitor can be returned from your date FREE OF CHARGE during guarantee period (UK Mainland only). **FREE TESTING PROCEDURES:** All computers are thoroughly tested prior to despatch, all tests are supplied with name plate where required.

# Austerlitz

COMING SOON ON ATARI ST, AMIGA & PC

*Get ready to experience the  
Horror and Glory that was the  
battle of Austerlitz*

The date is the 2nd December 1805. The place is a few miles east of Brunn in the province of Moldavia. Ranged across the barren Pratzen heights are the forces of the Austro-Russian army. Facing them, between Santon Hill and the River Boscurtz is Napoleon's Grand Armée. The greatest battle ever to be fought by France's 'Little Corporal' is about to begin.

Using a unique system developed by Dr. Peter Turcan, AUSTERLITZ gives you the opportunity to relive that battle. The battlefield is represented on your screen in incredible 3D graphics. You can actually observe your troops as they move and fight their way across the terrain.

Your orders are written out for your Corps commanders, just as they would have been at the actual battle, and then relayed by messenger riders. Of course, orders might be reinterpreted, ignored, or even fail to get to their anticipated destination, and even if they do arrive, it all takes time - exactly the sort of problems faced by Napoleon and the Russian Czar Alexander on that cold winter day.

*Play AUSTERLITZ, and take up the challenge that gives you the chance to rewrite the history books!*

# ARCADES

## E-SWAT

No prizes for originality, Segal. Their latest offering, *E-Swat*, is so clearly a "me-too" of *Robocop* that coin-op fans of high morals will refuse to play this on principle.

In fact, there are some slight-

ly different features to distinguish this from *Robo* in gameplay. For a start, the coin-op *Robocop* started off his onscreen life as an ironclad, whereas your *E-Swat* member (it's also got a

two-player option) has to earn his metal suit by blasting his way through three levels of baddies and apprehending some serious felons, thereby gaining promotion to roborank.

Actually, these three "intro-

ductory" levels are quite substantial, and feature all manner of skateboarding delinquents, knife throwing mobsters, gunmen, boomerang-tingling kidnappers and so on.

When you eventually make your way through these levels (be careful of your ammo, by the way — it's limited, though replenishable along the way) you get armour and weaponry more suited to a tank strapped onto you and you take off in search of still more enemies of society.

There's plenty of jumping and climbing involved, as well as blasting everything in sight, and some clever moments (in particular when a house wired with a whole system of time bombs collapses by stages about your ears) but, really, you'll have seen plenty of this kind of thing before, and more originally done. In addition, one particularly annoying restriction is that your shooter only delivers death vertically and horizontally — diagonal dishing is out. You do get special weapons with limited duration, and your destruction is gradual with bits of armour falling off.

Don't get me wrong; *E-Swat* is not terrible. It's not even bad. It's just nothing new, and with my attention span shortening as quickly as every other resident of the Instant-culture Eighties, that's going to condemn it to early retirement.

Cass: £9.99

Disk: £12.99

# TINTIN ON THE MOON

"Hello control station! Here is the moon rocket. Tintin speaking. I have just regained consciousness. Everything seems OK, we are now taking over the controls of the rocket." Aboard the rocket, you will relive with Tintin and his friends the most exciting adventure the

world has ever known. The first trip to the Moon!

Will you succeed in piloting the red and white rocket through space and achieve a flawless landing? Will you capture Colonel Boris, the traitor, who wants to make the expedition fail? Will you be able to find the extinguishers to put out the fires, even while floating in zero-gravity (which isn't everybody's idea of fun)? Will you succeed in finding and disarming the bombs and freeing your companions in order to get out of the rocket to make the first step on the Moon? You will discover all this by playing "TINTIN ON THE MOON", the first computer game based on the comic books by Hergé...

Before Armstrong there was Tintin and... may be you!

Available on : AMIGA, AMSTRAD, ATARI ST, SPECTRUM, C64, IBM PC.

# Tommy's TIPS

## Good books

● I am in need of some help please. I have owned a C64 for four years now and have never tried programming music, so I had a go and failed. I had hoped to reach the standards of Matt Gray or Martin Galway but the most I got was a couple of beeps, so I was wondering if there are any really good books to help or software packages. I own a freeze frame Mk5 professional but I don't know whether I can use it or not. I hope you can answer these two questions.

A. Silver,  
Harrington,  
London.

*The number of books available on music for the 64 seems to be decreasing, presumably reflecting the reduction in interest in this machine compared to the all-singing stereo mind-blowers like the Amiga. One book that is still available is 'Commodore 64 Sound and Graphics', published by Melbourne House and costing £5.95. This isn't the best that has been around, but it does show you the basics of creating music with the 64 and has some examples. You should be able to get a copy from Computer Manuals on 021-708 6000. As for software, there are several 'synth' type of programs available, but it is more a question of finding them in stock. Programs like Synth-64 were very good, but are becoming hard to obtain these days. If rather depends on whether you want to program the computer to make music, or just use the computer to make music. For the latter, 'Commodore's Sound Expansion System'*

*comes with a keyboard synthesiser software and editor and is excellent value. 'The Advanced Music System' from Rainbird Software is another one to look out for. Both of these can let you create sounds like Martin Galway even if you can't quite get the programming right! You may have to shop around to get either of these, but they are worth keeping your eyes open for.*

## Diy spreadsheets

● First of all, congratulations on your excellent mag. Now down to business. I am currently prototyping a spreadsheet program in AMIGA BASIC and have found a need to detect function keys and cursor arrow key presses but have been unable to find any documentation on this subject. Reference to the ROM Kernel Reference Manual: 'Libraries and Devices' has revealed how to do this from 'C' but I have been unable to utilise this information for use from BASIC.

Do any of your staff have any idea of how this could be accomplished and if so could you please pass the information on. The final version of my spreadsheet will be written in a more suitable language (probably C) but I chose BASIC for the prototype for speed of development. My current machine is an A500.

Any suitable information will be very gratefully accepted.

P.S. Do you know of a way of testing RAM chips — or anyone who could do it for me? I have 32 RAM chips for an A501 expansion (which only needs 16) but some don't

work — and I can't tell which ones.

P. Wynnard,  
Wigan.

*What you have to do is to read the key-presses directly from the keyboard as they occur and then take action depending on what has been pressed. This does make life more difficult since your program cannot then let the normal line entry default do most of the work. The way to read the keyboard is to open a file from the KYBD: device and then to use the command INKEY\$ to return the 'value' of the key that has been pressed. You can then jump to an appropriate subroutine depending on that value. In this way you can detect all ten function keys, the four cursor keys, the DEL key and even the HELP key. The following program will demonstrate the principle:*

```
OPEN "KYBD:FRED" FOR
INPUT AS I
GETKEY:
ASS = INKEY$
IF AS = "" GOTO GETKEY
PRINT ASC(AS)
IF AS <> "E" GOTO GETKEY
The last line just keeps the
loop going until you press
SHIFT E to stop the
```

*program. The values for each of the keys pressed will appear on the screen so that you can note them for action in the main program, e.g. pressing the HELP key will return a value of 139. As for the RAM chip testing, there is no simple solution to this one I'm afraid. Some RAM boards come with a program which will test all the chips after installation and highlight any that are faulty, but they still have to be mounted on the board first. The long winded way is to install the m on the board and see where the RAM error*

*is reported (or how much RAM you have). This will give you an idea of which one to change first and so on. However, RAM chips don't like excessive handling so make sure you take anti-static precautions or you could end up damaging some that are currently OK!*

## Better animation

● I've been using Deluxe Paint ever since I bought my Amiga (over two years ago) and being an art and design student, I really would like to upgrade to Deluxe Paint III but I know this needs a long to run properly. What I'd like to know is do you really think it's worth the money (about £170 altogether)?

I already have a Star colour printer which does prove very useful, and I would love to use the animation side of Deluxe Paint III to create some animations of my own. David Tolley,  
Mexborough.

*To be perfectly honest only you can say whether a particular program is actually worth the money, but if you are asking my personal opinion I would have to say that if you have the necessary drawing skills DPaint III is a superb program that really lets you use the Amiga graphics capabilities to the full. As for the usefulness of a 512 k RAM expansion, I think all Amigas should have one, not just for use with DPaint III. The extra memory really opens up the programs you can run on the A500 so I will advise if you can afford it — buy it!*

## Basic hacks

● I have recently been experimenting with Amiga Basic and have written a small program (a sort of database). Anyway I was reading a section on saving files to disk. It said that if you place a letter 'p' after the name of the program you are saving it will protect the program by not allowing anyone to list and hence alter the program code. Well I thought, let's give it a go. What a stupid idea! I of course can no longer list the program that I have written, and worse still I have not yet finished putting the final

Let's have a bit of hush, music lovers. Tommy's tuning his brand new double bass.

touches to it. So I was wondering if you would be able to give me a machine-code routine or similar to get around Amiga Basic and so trick the Amiga into thinking it should allow the user to gain access to the program listing. The reason I am asking for a routine is because I have not found any way by means of Amiga Basic to unprotect a program once done so. I hope you can help in some way, otherwise the only decent program I have written on the Amiga will remain half finished!

Kieron White,  
Wimbourne.

First of all, what on earth were you doing messing around with the only copy of the program? Have you never heard of archives, which means that each time you finish a particular section of work on a program, you copy the latest version on to a separate disk. Then, if anything happens to damage, delete or, in this case, lock up your program, you go back to the previous version and carry

on where you left off (end of lecture). As for getting round this particular problem, the whole object of this protection is to stop you doing the very thing you are attempting. Even if you copy the program it will still be scrambled. Since the program can be unscrambled as it is interpreted there must be a decoding routine built-in to the ROM, but in this case I have to confess ignorance as to its whereabouts. If any of our readers have found a way to hack into a protected BASIC program then please let me know, but in the meantime you'll just have to put this one down to experience — bet you don't make the same mistake again!

### Display goods

● Could you devise a program that would allow me to chip into my CBM64's ROM to change the display screen that greets you when you turn the computer on? Some of the changes needed are

colour, text and the possibility of a password feature.

For safety purposes could you also include a program/SYS command/etc. that would reset the ROM to its original state?  
Grant Cooper,  
Enfield,  
London.

One of the features of a ROM is that you can't write to it; it is a READ ONLY MEMORY! Now, the C64 is designed such that you can copy the contents of this ROM into RAM and then alter it so that the operating system does different things like changing error messages etc. You also then have to alter all the vector addresses to the required routines, but that's not too much of a problem. Unfortunately, this can only be done after the machine has been switched on and completed its power-up routine, since any changes made are immediately lost when the power is switched off.

The only possible way of altering the initial start-up

condition is to create your own cartridge which will then auto-start. Because the cartridge port is checked before the screen sign on message appears, it is possible to do this ROM copy and the necessary alterations, including asking for a password, before control is passed to the keyboard. However, while this may be possible, it seems a very expensive way of going about things even taking into account the availability of such things as an EEPROM (Electrically Erasable Programmable Read Only Memory) in a cartridge unit.

The simple answer is, that unless you want to go to all the trouble and cost of putting the program into a cartridge, it is not possible to do what you require.

### Digitiser

● I own an Amiga 500 and would like to use it for video digitising.

What hardware/software would I have to have to capture, computerise and print a picture and how much would it cost?

M.P. Kelly,  
Dyfed.

The very least you will need is a video digitiser, such as DIGIVER GOLD which includes the necessary hardware and software to capture and store a frame from a TV camera, a video camera itself, a graphics program such as DPaint II (or AI) to customise the image, and finally a dot-matrix or ink-jet printer to produce the image on paper. Ideally you will also need a stand for mounting the camera and colour wheel (for making a colour picture using a B&W camera). Depending on the cost of the camera, you can expect to pay in the region of about £600-£700 for all that.

If you want to print colour pictures, then add another £100 at least (unless you purchase the OKIMATE 28, in which case the original cost will cover it). If you are thinking of producing really high quality pictures then the video camera alone could cost anything from £300 to £600 (B&W is all that's needed for static shots, but you'll want a good lens) and the printer could cost as much as £1200 (Xerox 4020). Yee pays yer money. . .

# IT'S A MONSTER

**J**anuary's issue is going to be another big one, but its real monstrousness comes from our look at some classic old B Movies. Timed to coincide with the release of *It Came From The Desert*, Cinemaware's 'small town in bug horror' game. We run you through some of the most bizarre sci-fi films ever-released including the 3D blockbuster 'Creature From The Black Lagoon', 'Them', and 'Forbidden Planet'.

## FREE

Plan your year with CU's giant calendar poster. It highlights everything from CU's publication date to the Ed's birthday (well the last bit's a lie, he's just sore because we forgot it this year).

## PLUS

CU's staff let you in on their favourite games of the year and compile a chart of them. Which piece of software will be the reviewers' choice for the number one game of 1989?

## COMPETITIONS

We promised you a whole heap last month. It turned out to be five in total totalling approximately £1,000 of prizes. We're aiming for the same again next month. Watch out especially for the great CU Trivia Quiz — a real test of gaming knowledge.

## REVIEWS

*Operation Thunderbolt*, *The Lost Patrol* and *F-29 Retaliator*. Plus *Ghostbusters II*, *Ghouls 'n' Ghosts*, *Blade Warrior* and *Bomber*.

# OUTER LIMITS

## SUNRISE FM

could be your favourite radio station if you go for a Ross solar powered radio. Its rechargeable batteries top up each time it's exposed to daylight. It comes with stereo headphones at £19.99.

## TIME FLIES

Well actually it seems to float with the Ross RCR-3 portable clock radio. The LCD numericals appear to hover in the centre of the display. Yours for £24.99.

## SAMPLICITY

comes at affordable price with Casio's latest keyboard. The SA-1 is a polyphonic keyboard with submini keys and 100 tones from accordion to triangle. It retails for a mere £29.99.

## THE JOKES ON YOU

again with the long awaited appearance of the new Morrison and McKean Batman graphic novel Arkham Asylum. A Karma Extra Classic adorns the cover of When Saturday Comes' long awaited special. It comes in hard back and features all new material.

## ◀ KEEP AN EYE ON THE TIME

with this clock. The hands are rearranged so that the small marker point to the hours and minutes in a less than conventional manner. Price £29 from Rexie, 76 Warren Street, London.

## THE PERFECT MIX ▶

for your own home videos is at hand if you use the VCR Video Sound Mixer which enables you to create your own soundtracks. Available from The Leading Edge (addresses centre) for £29.95.

## ◀ GRAND HANDSET

If you see yourself as Liberace you can tickle the ivories as you make that call with this telephone. Discover the lost chord as you phone home for £29.95 (available from The Leading Edge in Whiteleys, Bayswater, and Heathrow and order through Innovative).

## ◀ NEON CLASSIC

The Marilyn radio is based on art deco design lines and glows colourfully in the dark. Available price £182.95 from Testarossa, 19 Sharn Garden, Covent Garden, London WC1.
